河北巧万金属制品有限公司

Hebei Qiaowan Metal Products Co.,Ltd.

ENTERPRISE PROFILE

Hebei Qiaowan Metal Products Co., Ltd. is located in the southeast of Hebei Province, with convenient transportation and a superior geographical location. Major railways such as the Beijing-Shanghai Line, Shide Line, and Beijing-Kowloon Line, as well as expressways like Jingfu and Jishi, pass through the area.

Our company is a professional supplier specializing in the production and sales of industrial and mining accessories. With a scientific management system, a top-tier R&D team, advanced production equipment, and cutting-edge testing methods, we ensure the reliability of our products.

Our main products include flotation machine impellers, rubber liners, hydrocyclones, polyurethane plates, polyurethane composite pipes, polyurethane screens, conveyors and accessories, hydraulic assemblies, sealing components, nylon products, metal hoses, mining hoses, high-pressure oil pipes, corrugated compensators, rubber expansion joints, sand pumps, protective sleeves, and more.

Our products are widely used in industries such as coal, mining, oil fields, chemicals, construction, food, pharmaceuticals, environmental protection, water conservancy, metallurgy, steel production, and machinery.

We uphold the business philosophy of integrity, quality, efficiency, and innovation, and embody the corporate spirit of keeping pace with the times, striving for excellence, meticulousness, and selfless dedication. Our goal is to align with international standards and build a world-renowned brand.

In the new century, we sincerely look forward to working hand in hand with new and old customers to create a brilliant future and write a new chapter in the history of high-tech development.

Integrity across the world, harmony and mutual success.

PRODUCT CATALOG

PU Lined Pipe	01
Polyurethane Screen Panel Series	02
Hydrocyclone Series	03
Idler Series	04
Roller Series	05
Flotation Machine Spare Parts Series	06
Impeller Cover Plate Series	07
Polyurethane Sheets/Rods	08
Polyurethane Shaft Series	09
Custom-Shaped Nylon Parts	10
Custom-Shaped Polyurethane Parts	11
Metal Hose	13
Rubber products	15
Rubber Products Series	16

PU Lined Pipe

PU Lined Straight Pipe

PU Lined Straight Pipe

PU Lined Straight Pipe

polyurethane Lined elbow pipe

PU lined straight pipe

Costumized PU lined Pipe

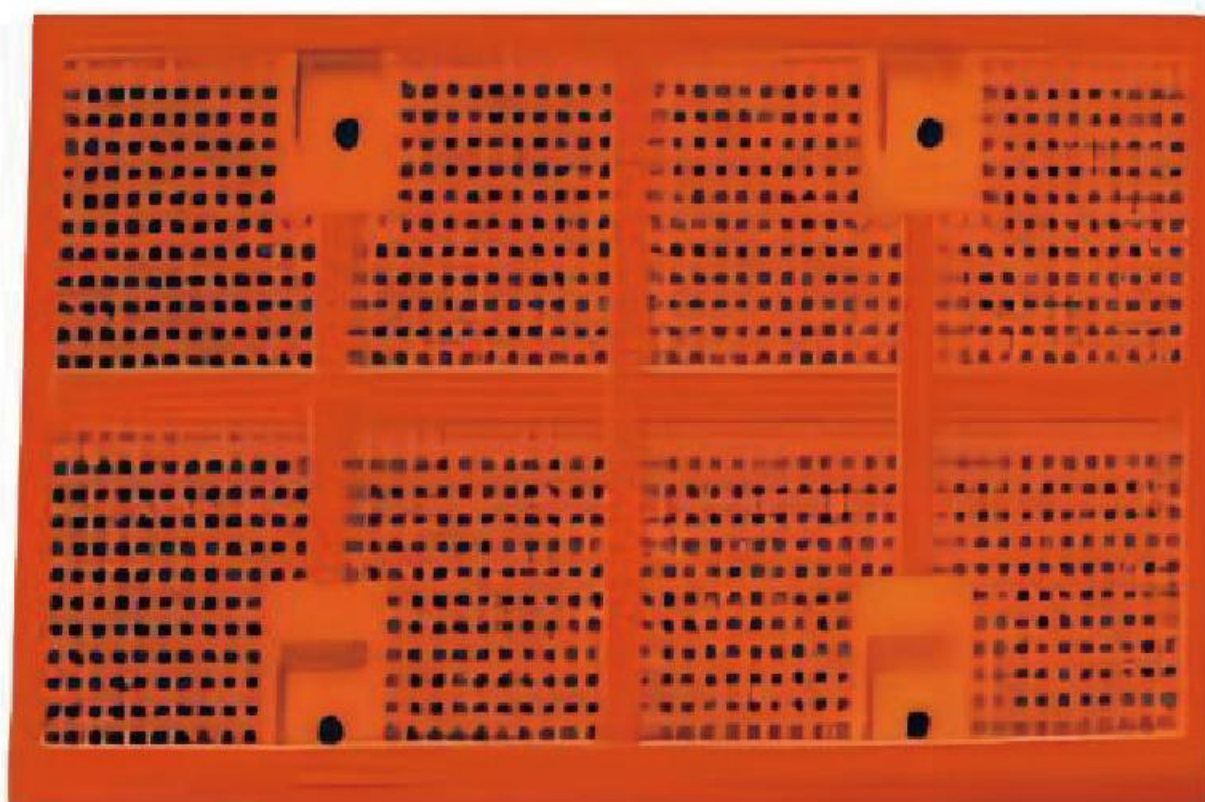

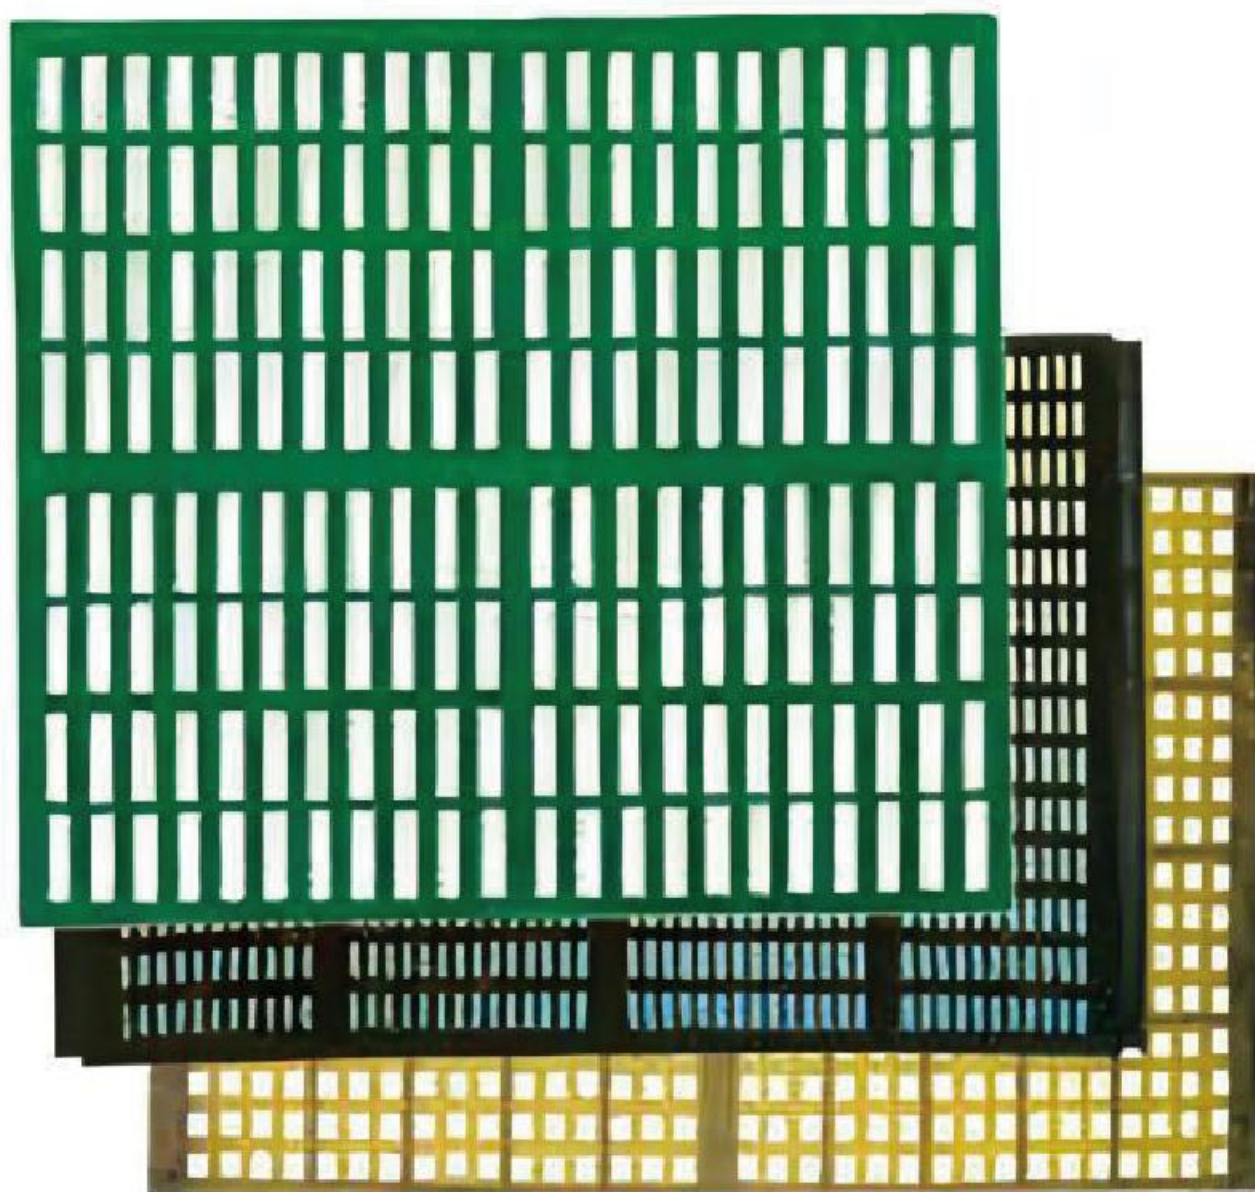

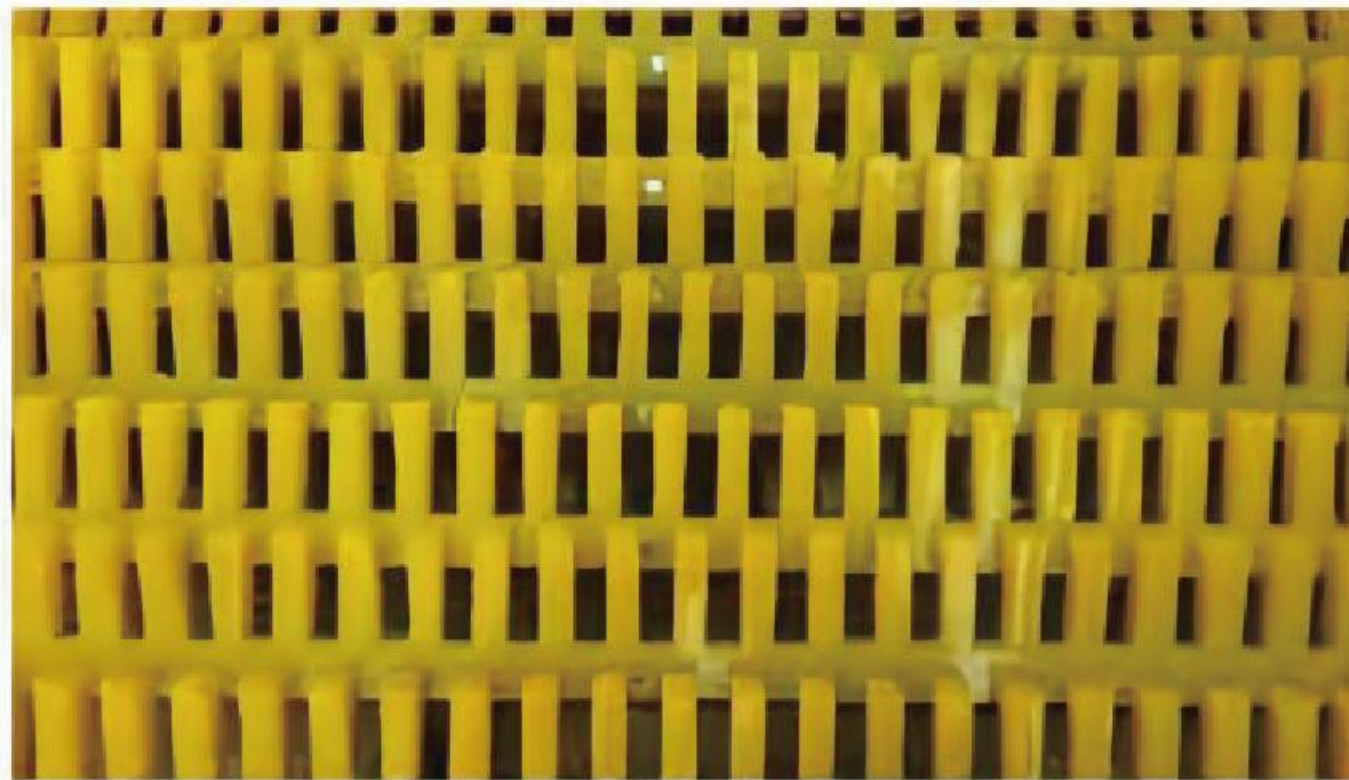

polyurethane lined tee pipe

Polyurethane Screen Panel Series

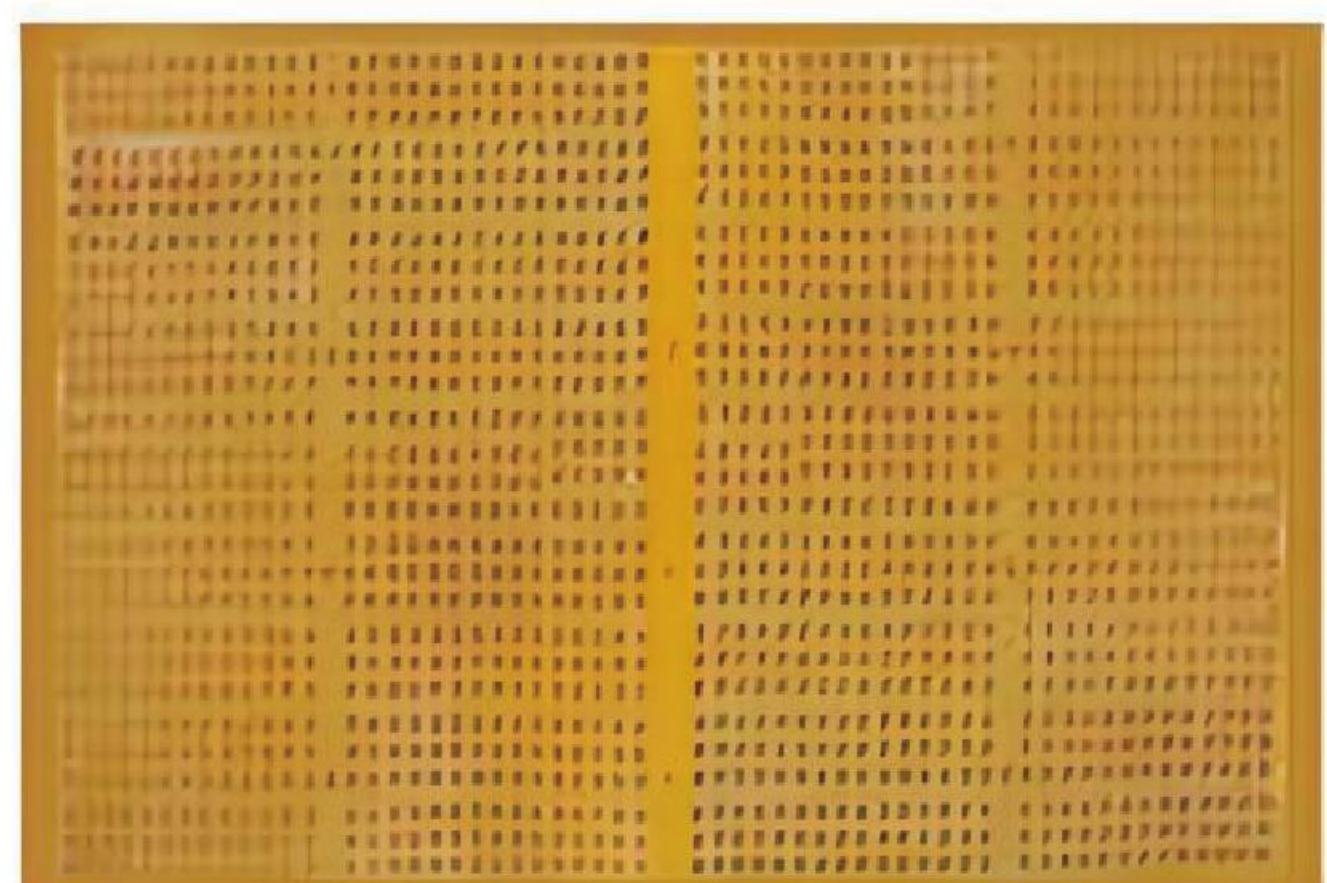

Scope of application

Metallurgy (iron ore, limestone, fluorite, cooling high furnace slag, coke and other raw materials), non-ferrous, gold, coal, chemical, building materials and hydro-power engineering, abrasives waste treatment, quarry and other industrial materials washing, screening, grading, slag removal, sludge removal, dehydration and other machinery industries.

Function and characteristics

1. Polyurethane elastomer sieve plate has good wear resistance and long service life, which is more than ten times that of metal screen, 3-5 times that of ordinary rubber plate, and 2-3 times that of stainless steel.
2. Tons of ore consumption is lower than the metal screen net.
3. Good moisture resistance and wear resistance.
4. Shock absorption and noise reduction, lower than the metal sieve plate (net) more than 10 dB times.
5. Automatic cleaning, due to the characteristics of polyurethane secondary vibration, it does not block the hole, screening efficiency is high.

Hydrocyclone Series

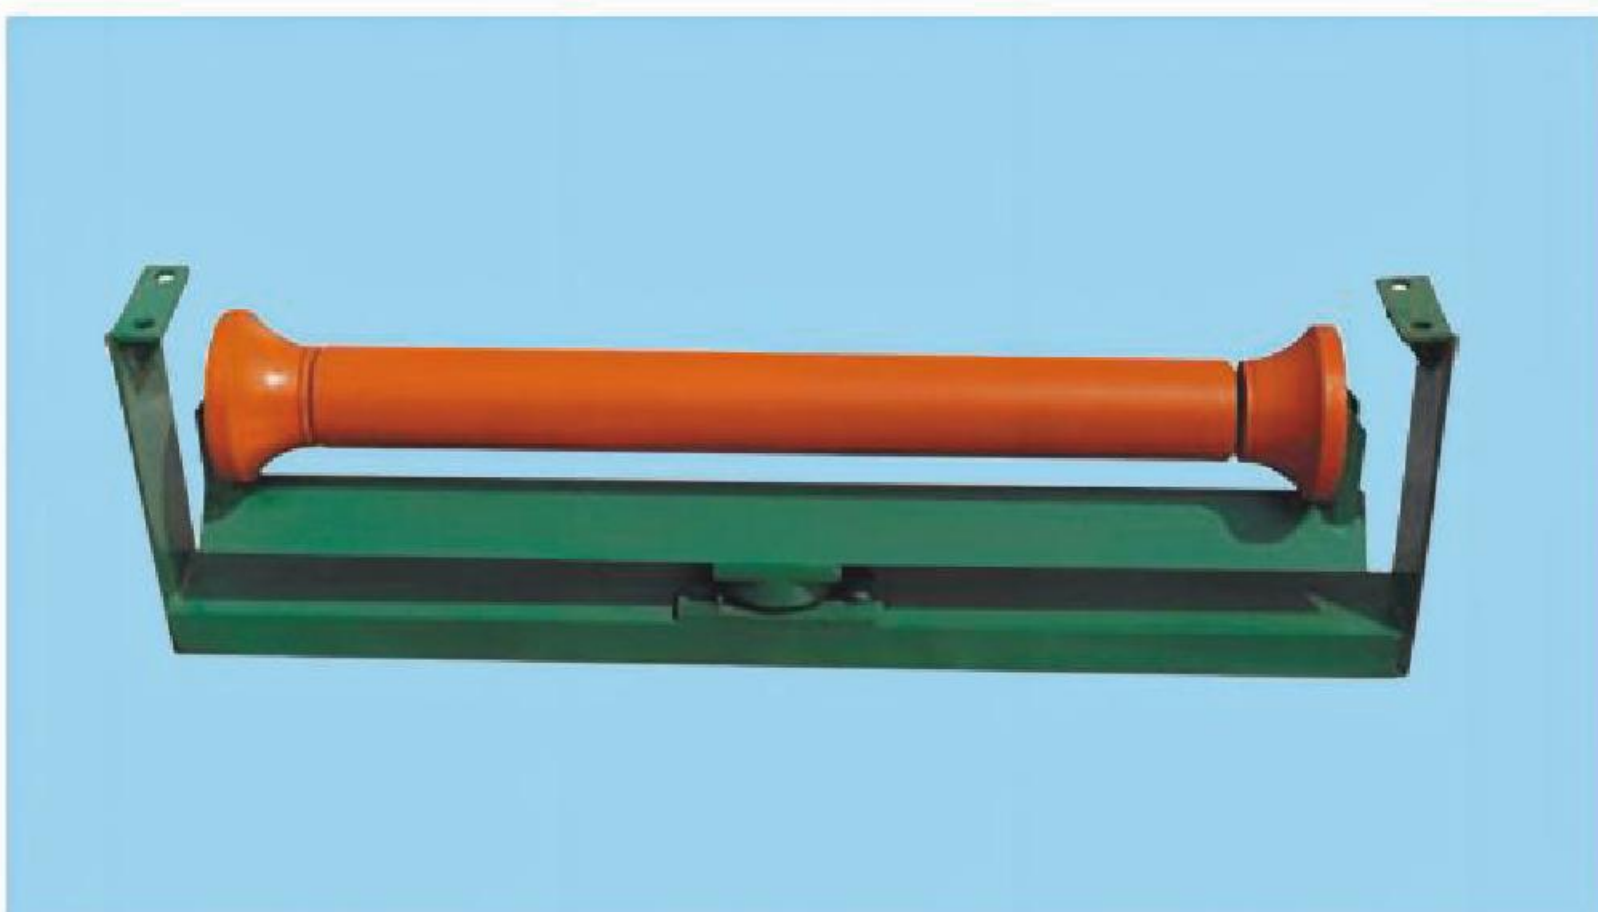

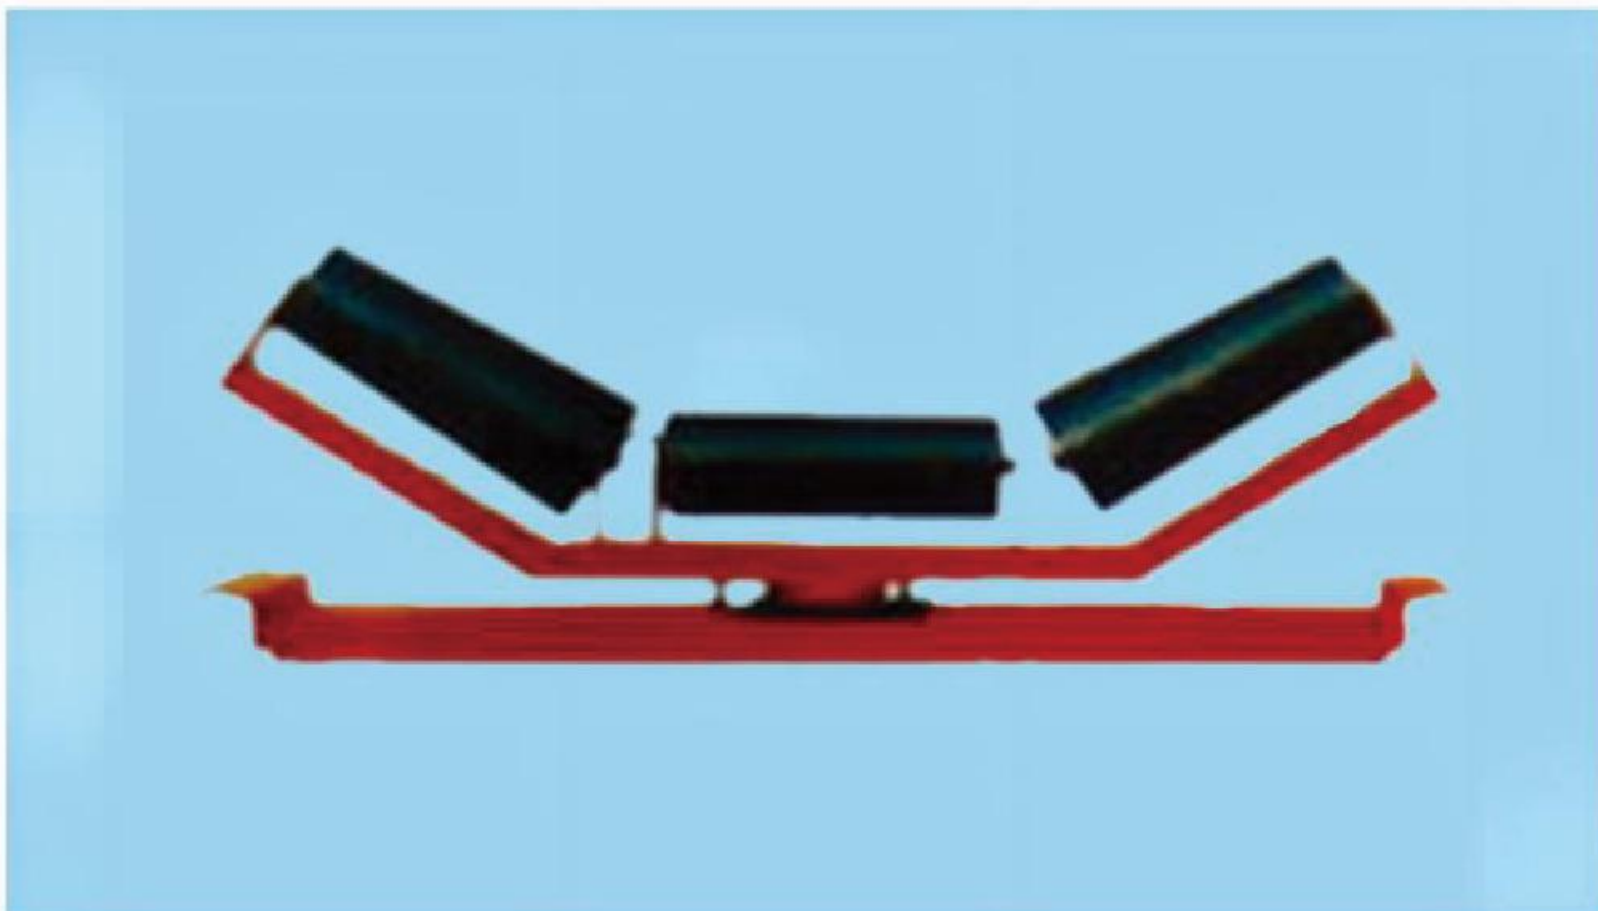

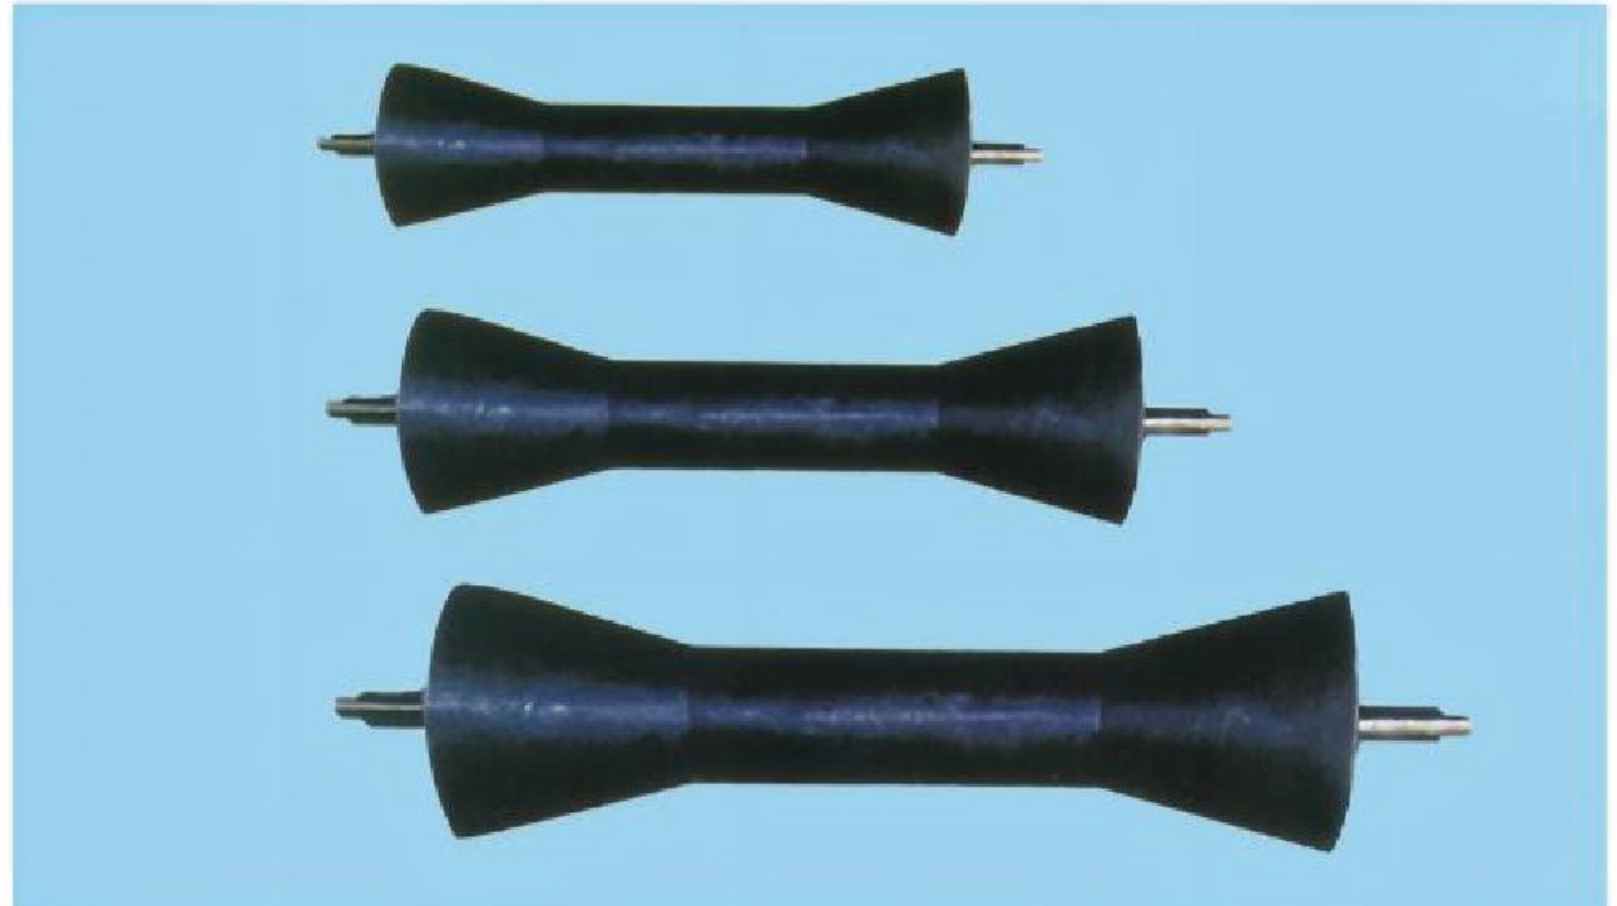

Hydrocyclone is an efficient separation device used for solid-liquid or solid-solid separation in industries such as mining, environmental protection, and chemical processing. It operates based on centrifugal force to achieve precise classification or dewatering. We specialize in customizing hydrocyclones in various styles, materials, and sizes to match your specific working conditions and performance requirements. Drawings and samples are welcome for tailored solutions.

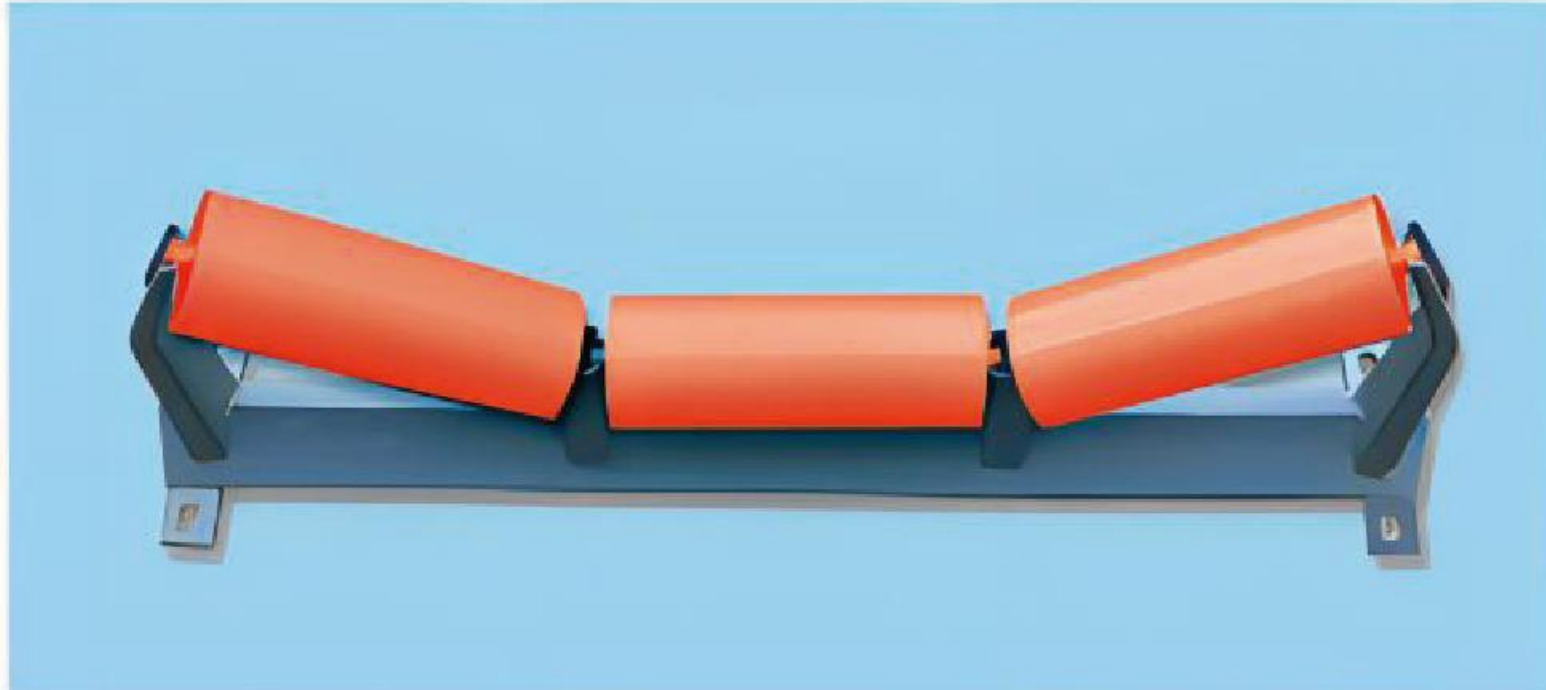

Idler Series

Idlers are critical components in mining conveyor systems, available in many types and used in large quantities. Our company has made substantial investments in advanced production lines and equipment for idler manufacturing. As a result, our idlers offer long service life, light weight, low rotational inertia, optimized structure, reliable sealing, and excellent corrosion resistance. We also provide custom idlers tailored to specific mining applications and customer requirements.

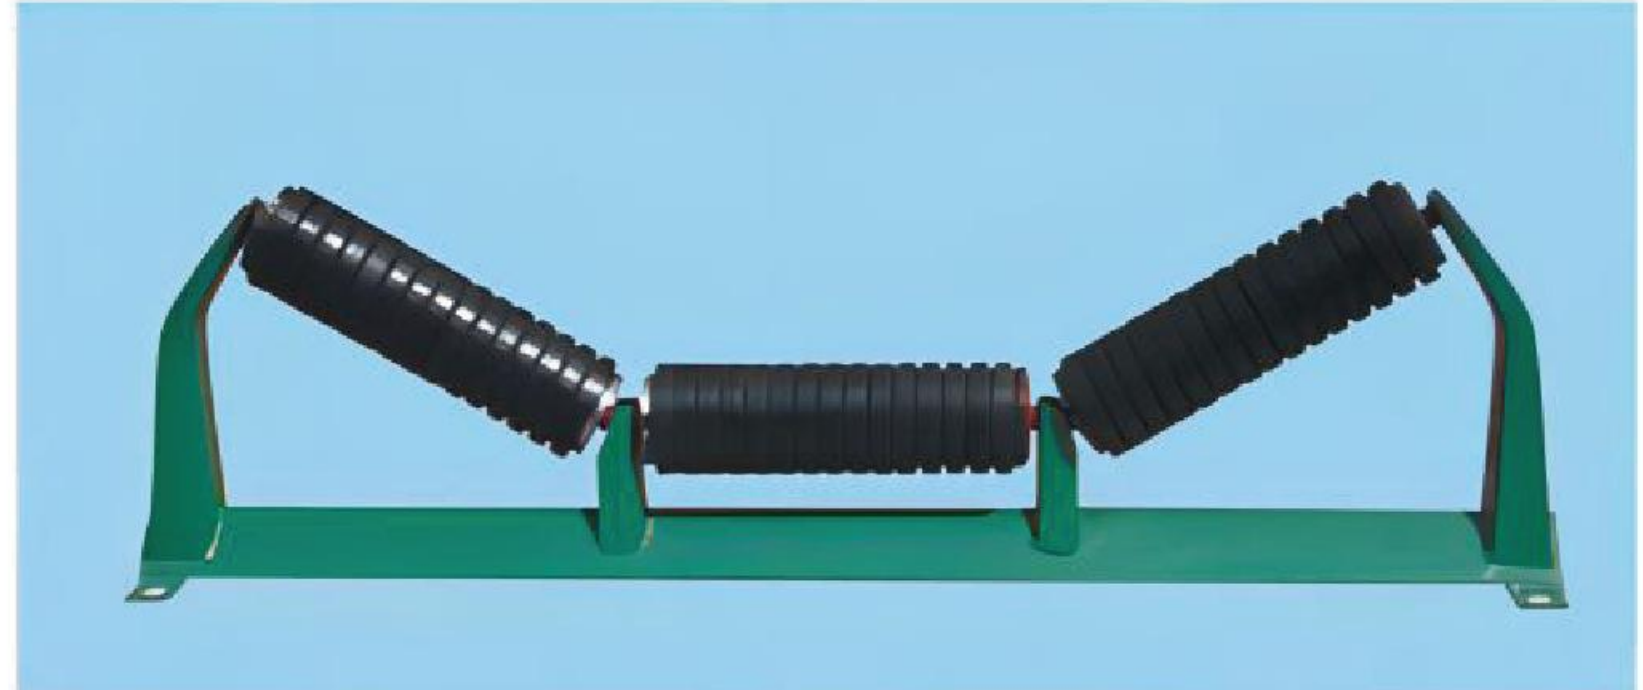

Roller Series

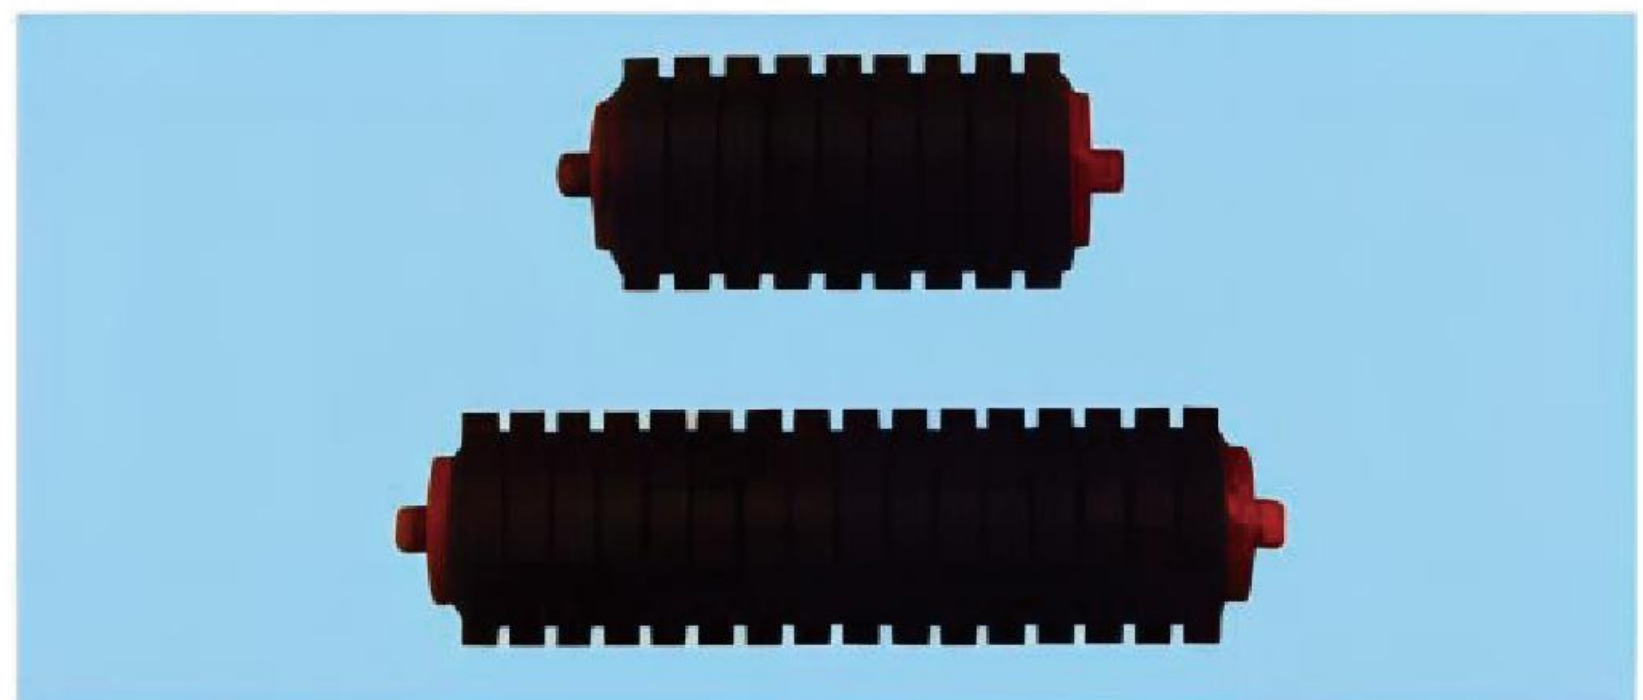

Trough idler

Transition idler

Adjustable trough idler

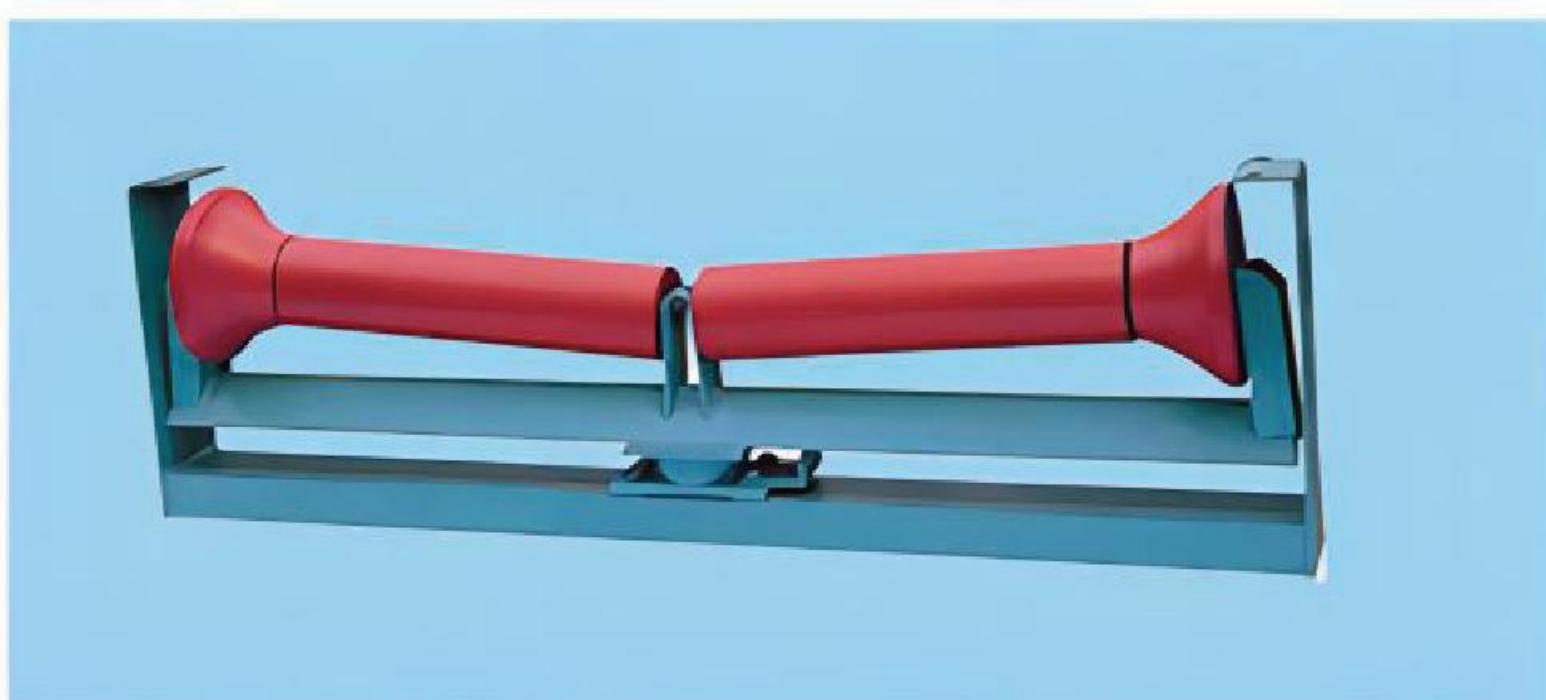

Impact idler

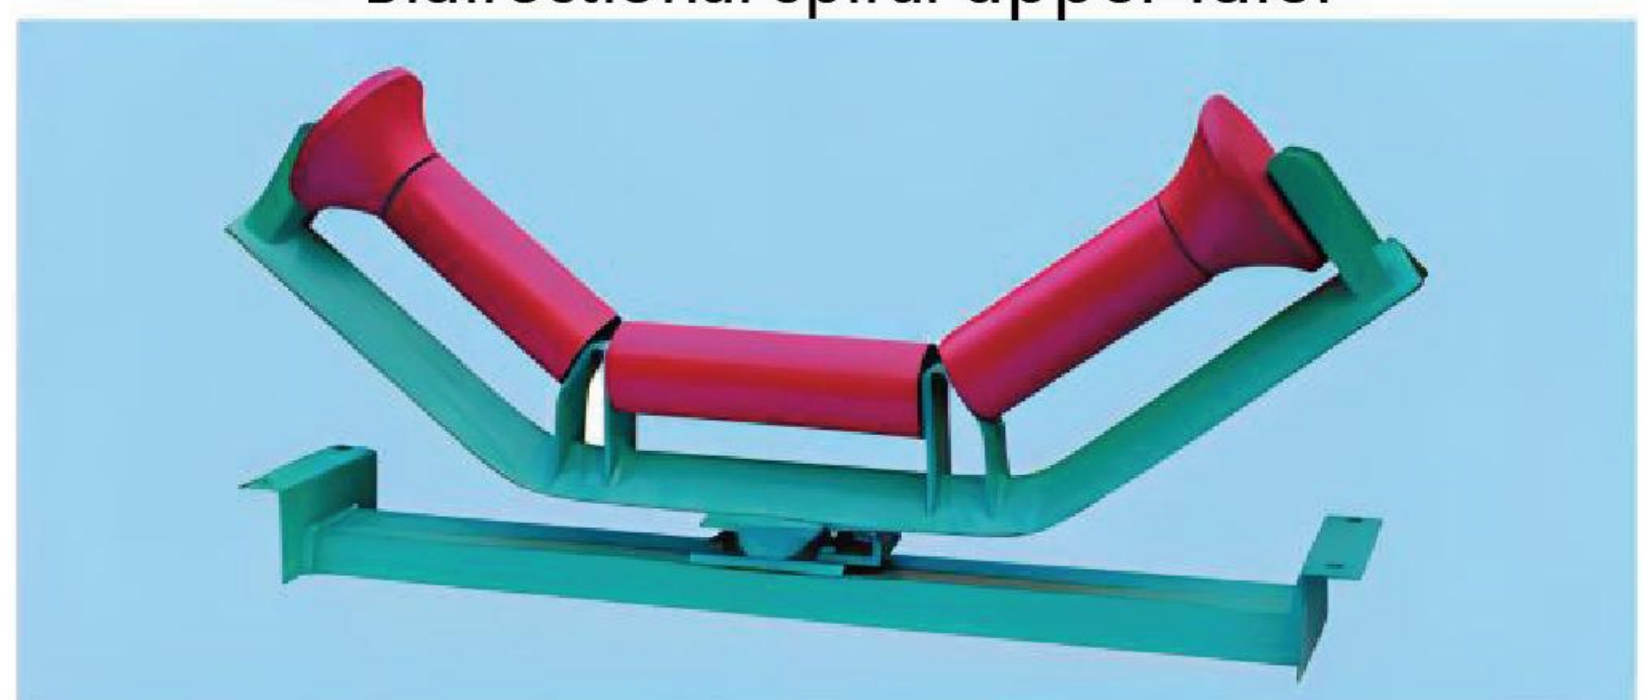

Rubber-coated idler

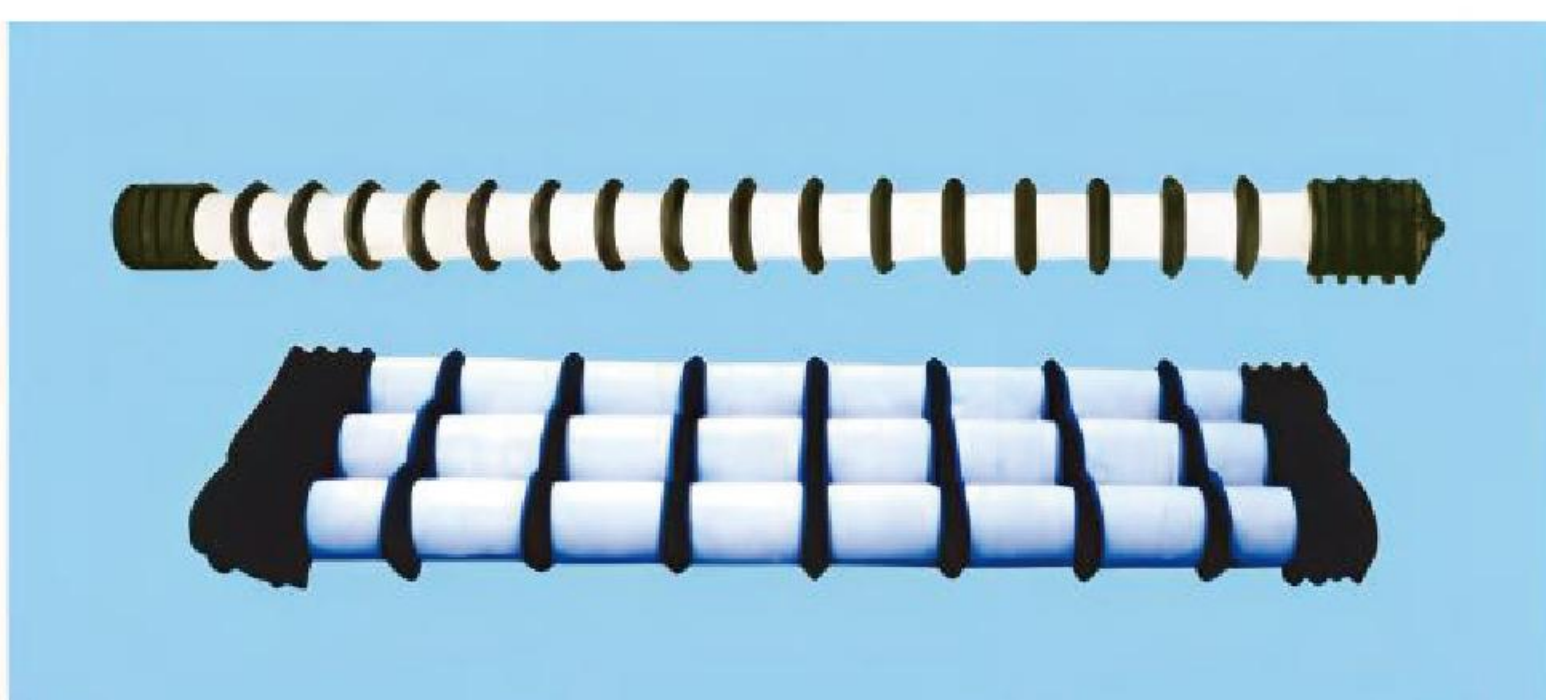

Bidirectional spiral upper idler

Parallel friction idler

Friction self-aligning upper idler

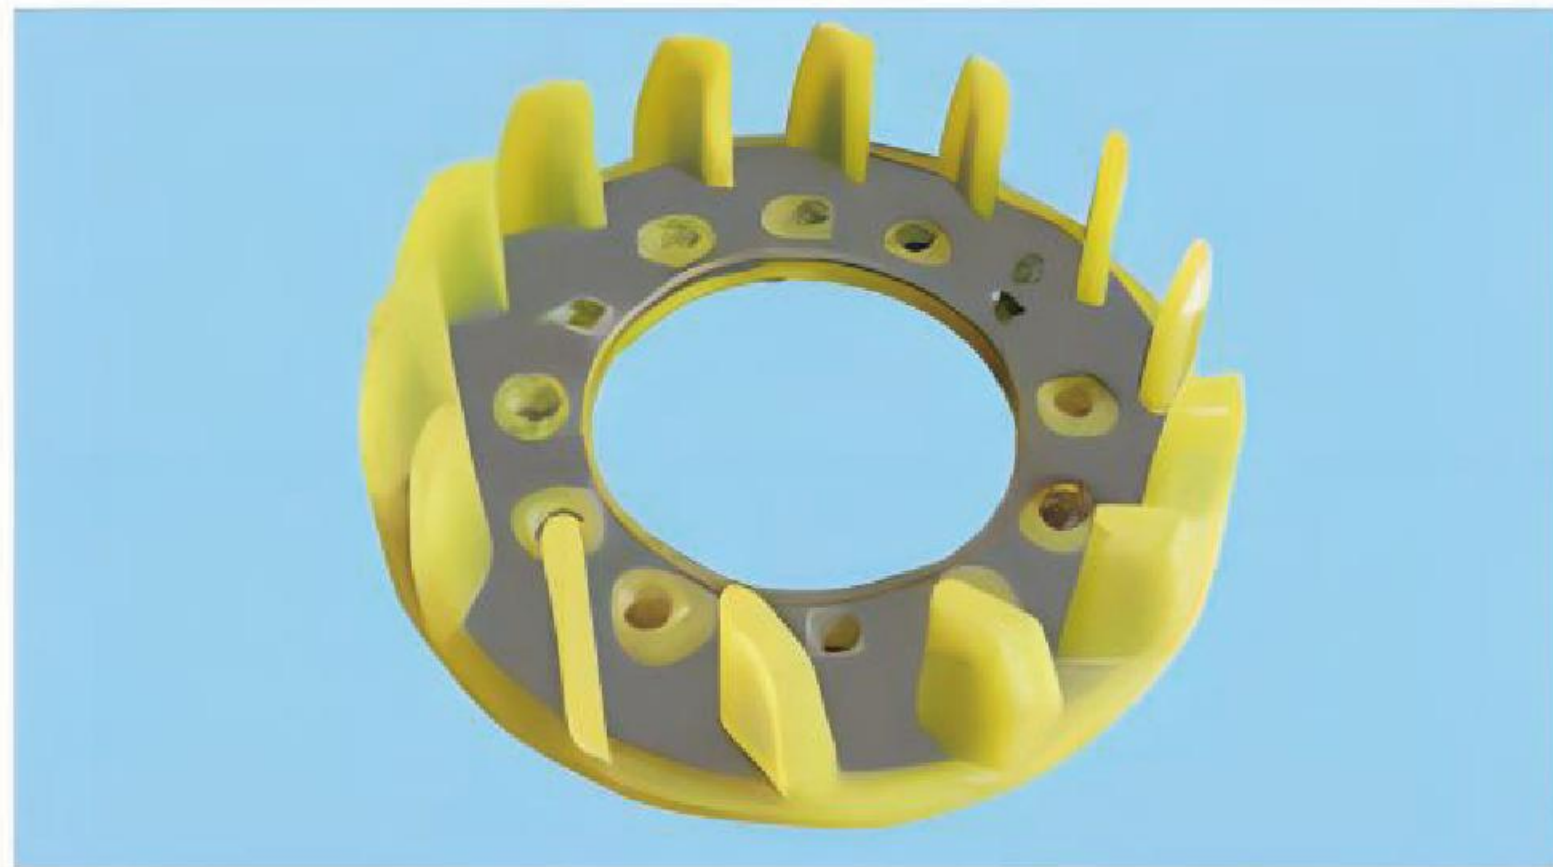

Comb-type idler

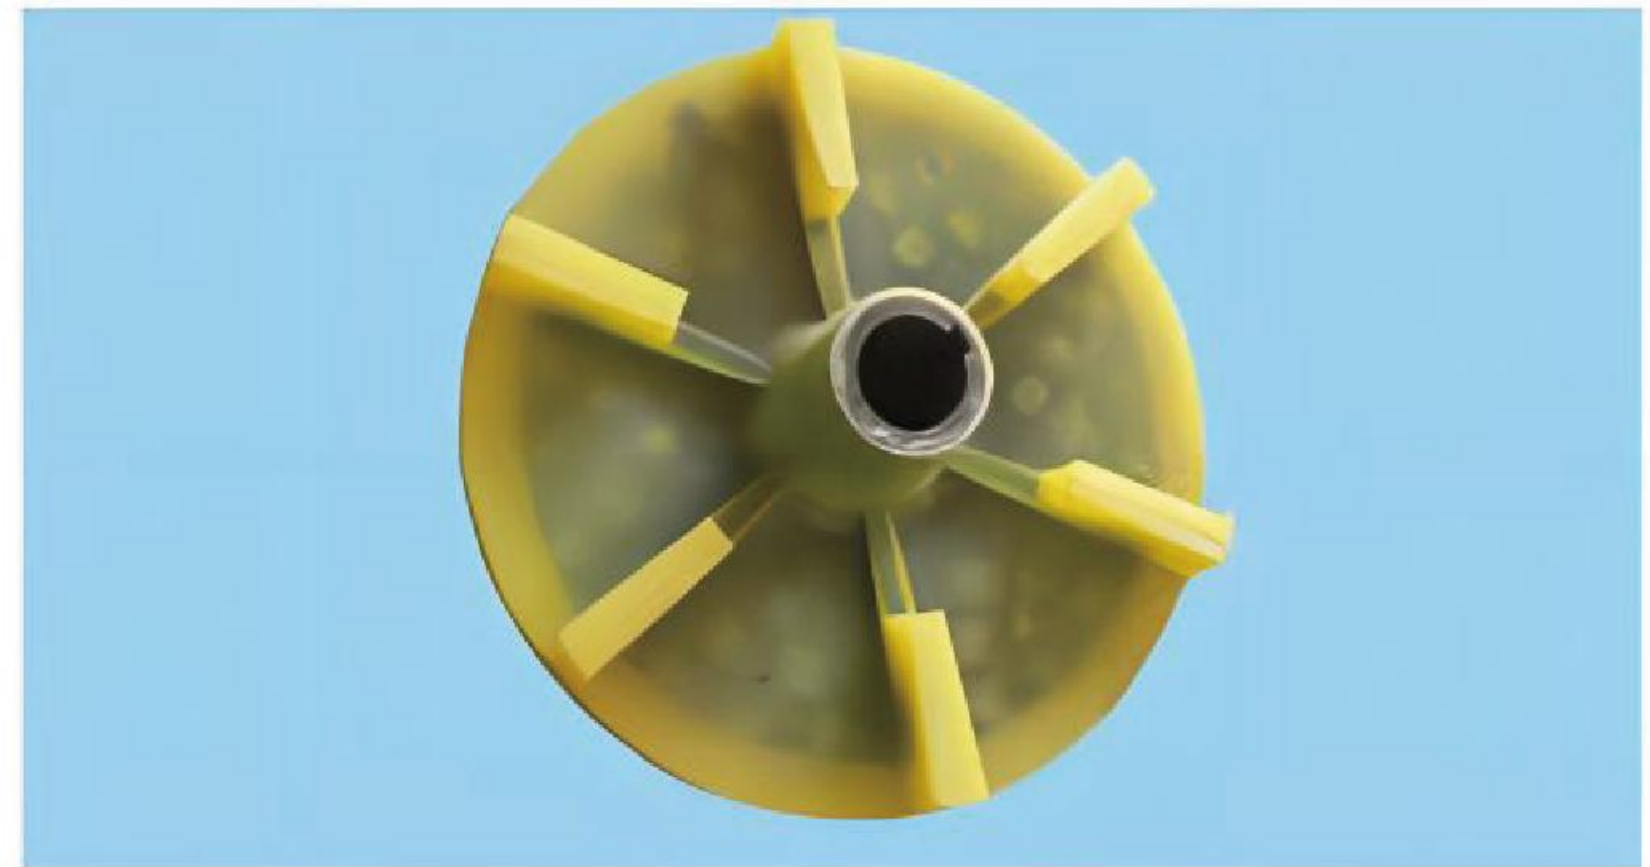

Conical idler

Flotation Machine Spare Parts Series

Nylon impeller cover plate

Nylon stator and rotor

BSK stator and rotor

JJF rotor

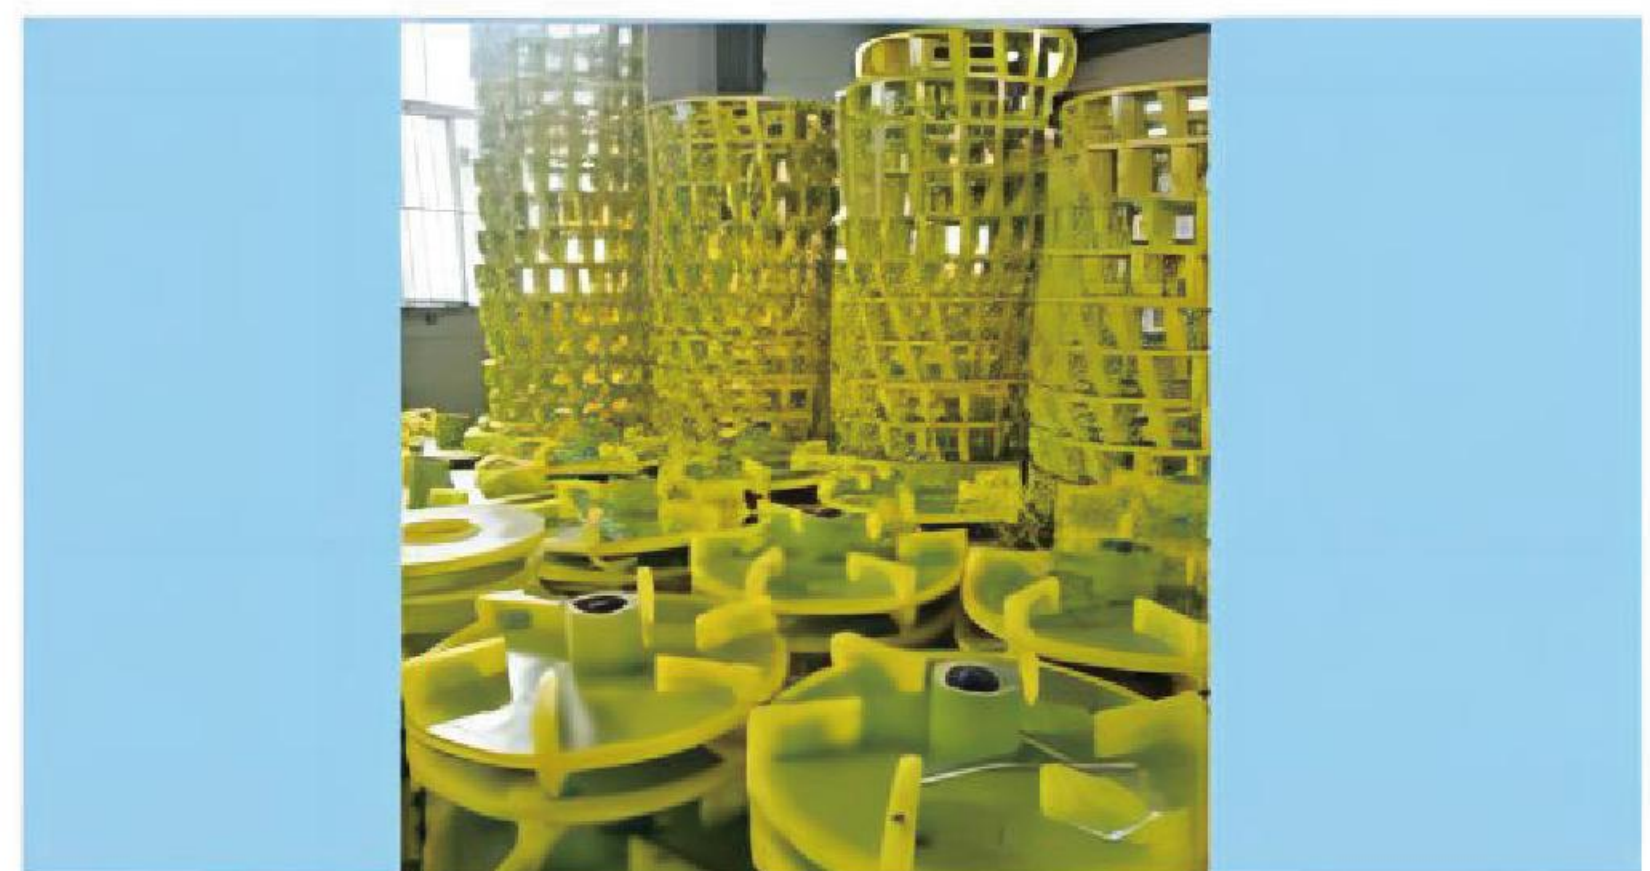

KYF rotor and stator

Rubber impeller cover plate

Polyurethane impeller cover plate

Polyurethane impeller cover plate

Impeller Cover Plate Series

BF type stator and rotor

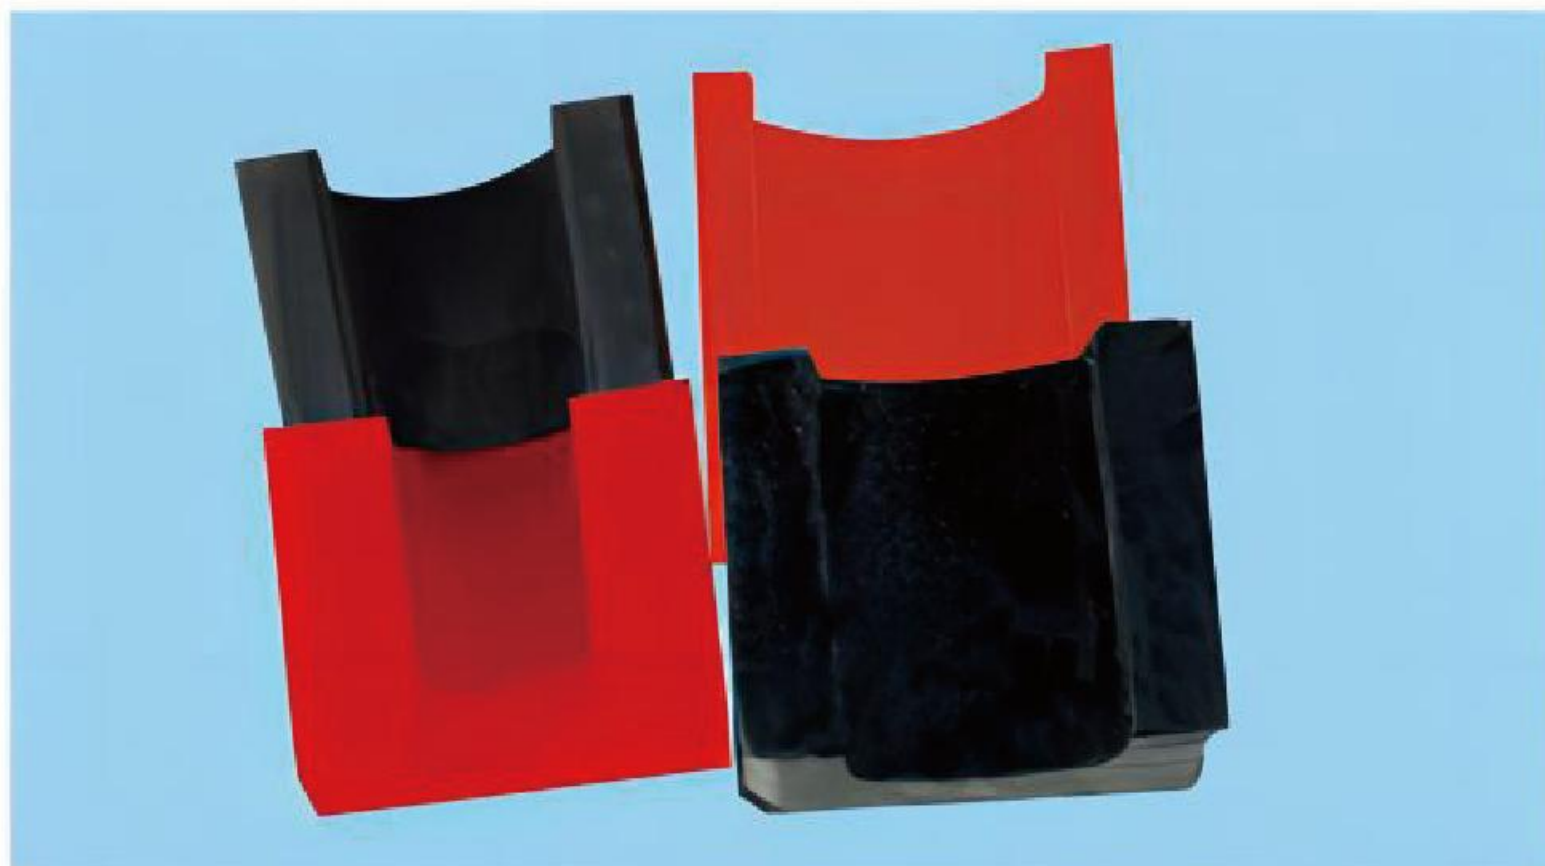

3F1 / 2A polyurethane impeller and cover plate

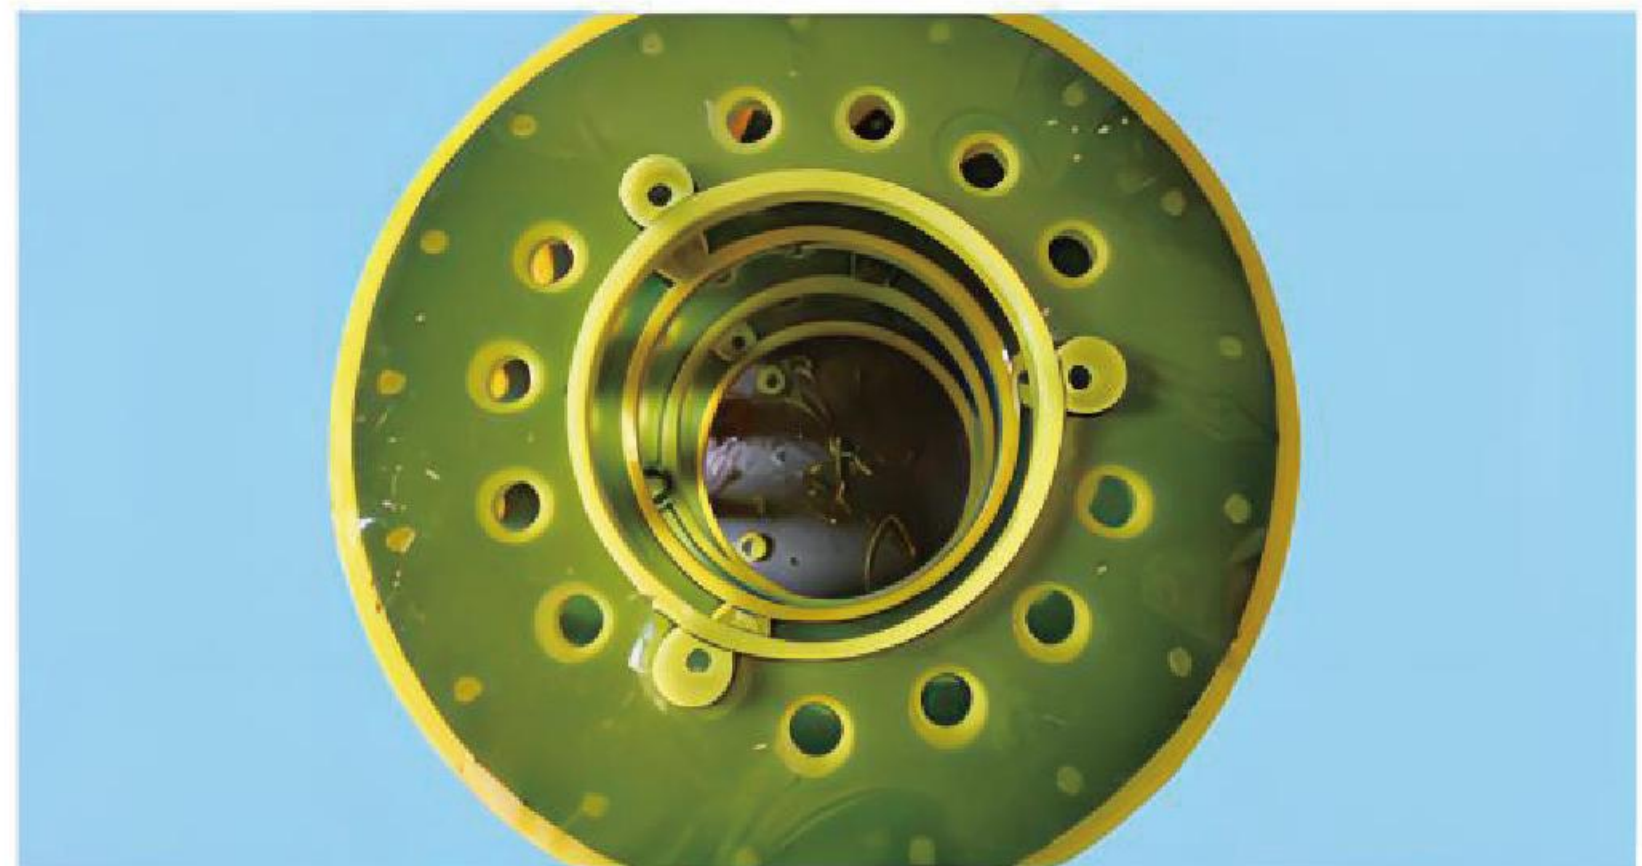

SF type stator and rotor

Rubber impeller for mixing tank

Flotation machine bearing seat

Stator and rotor

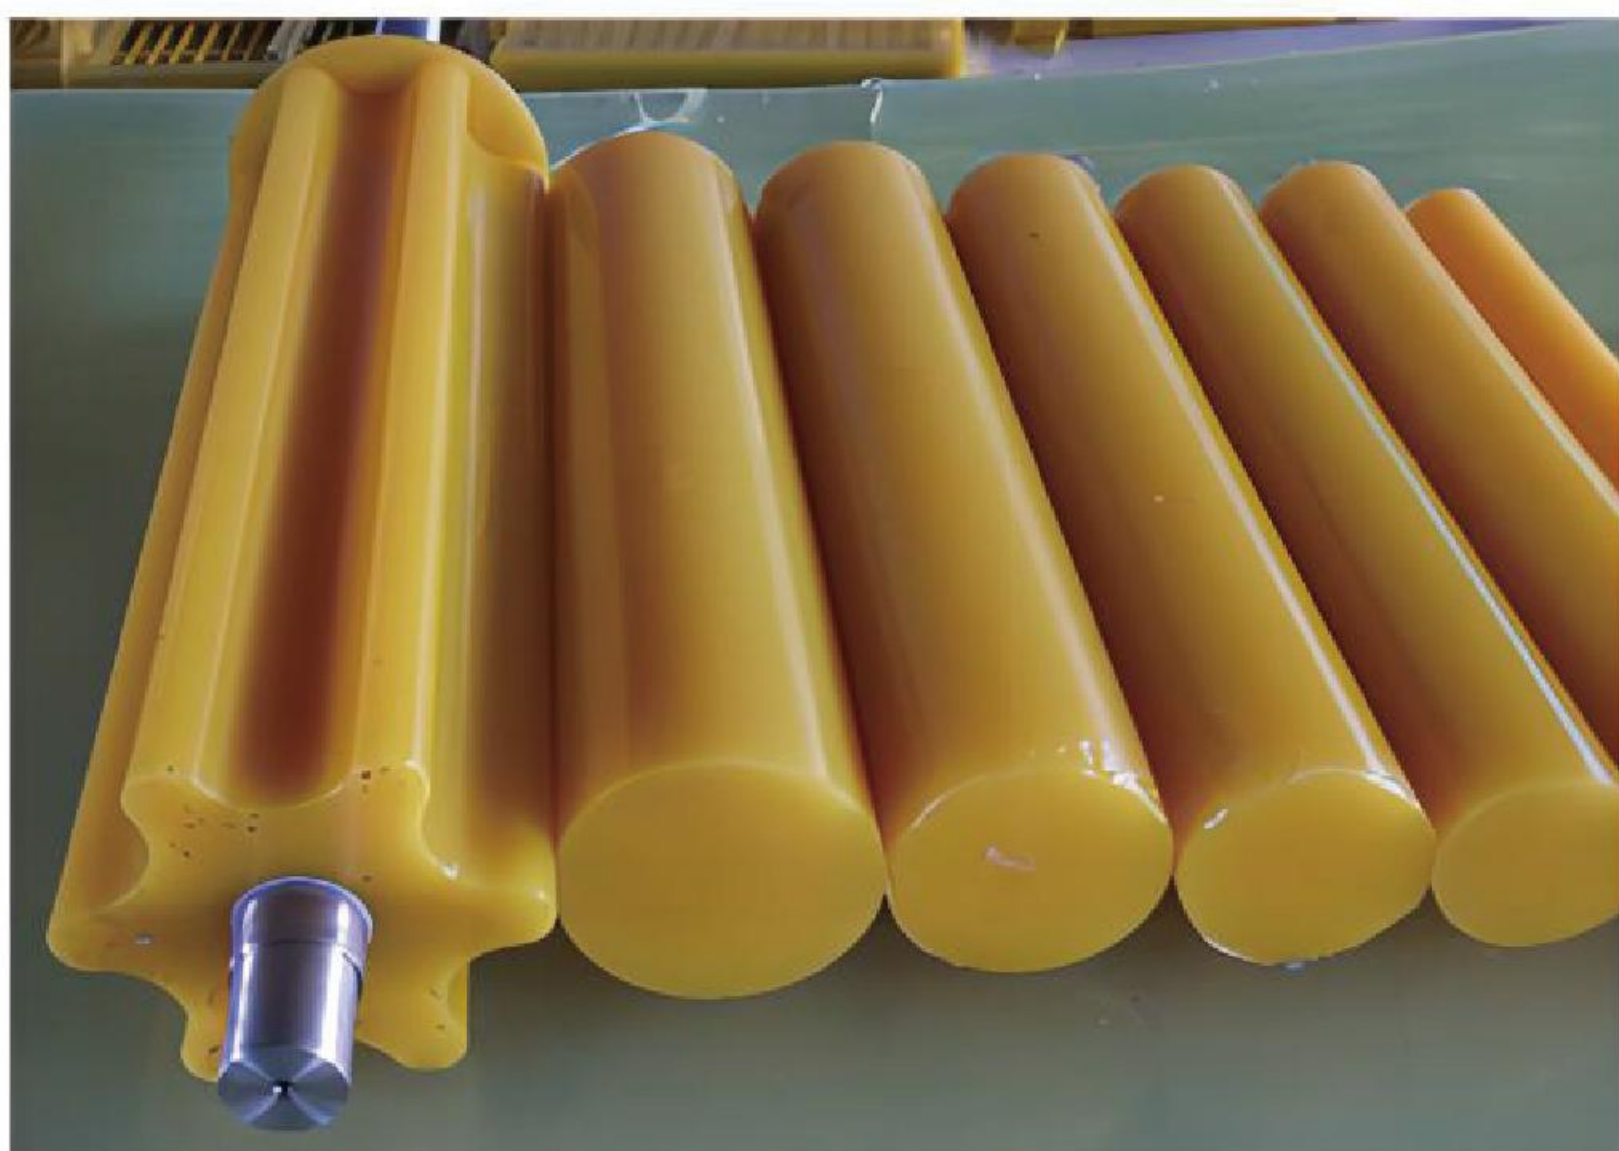

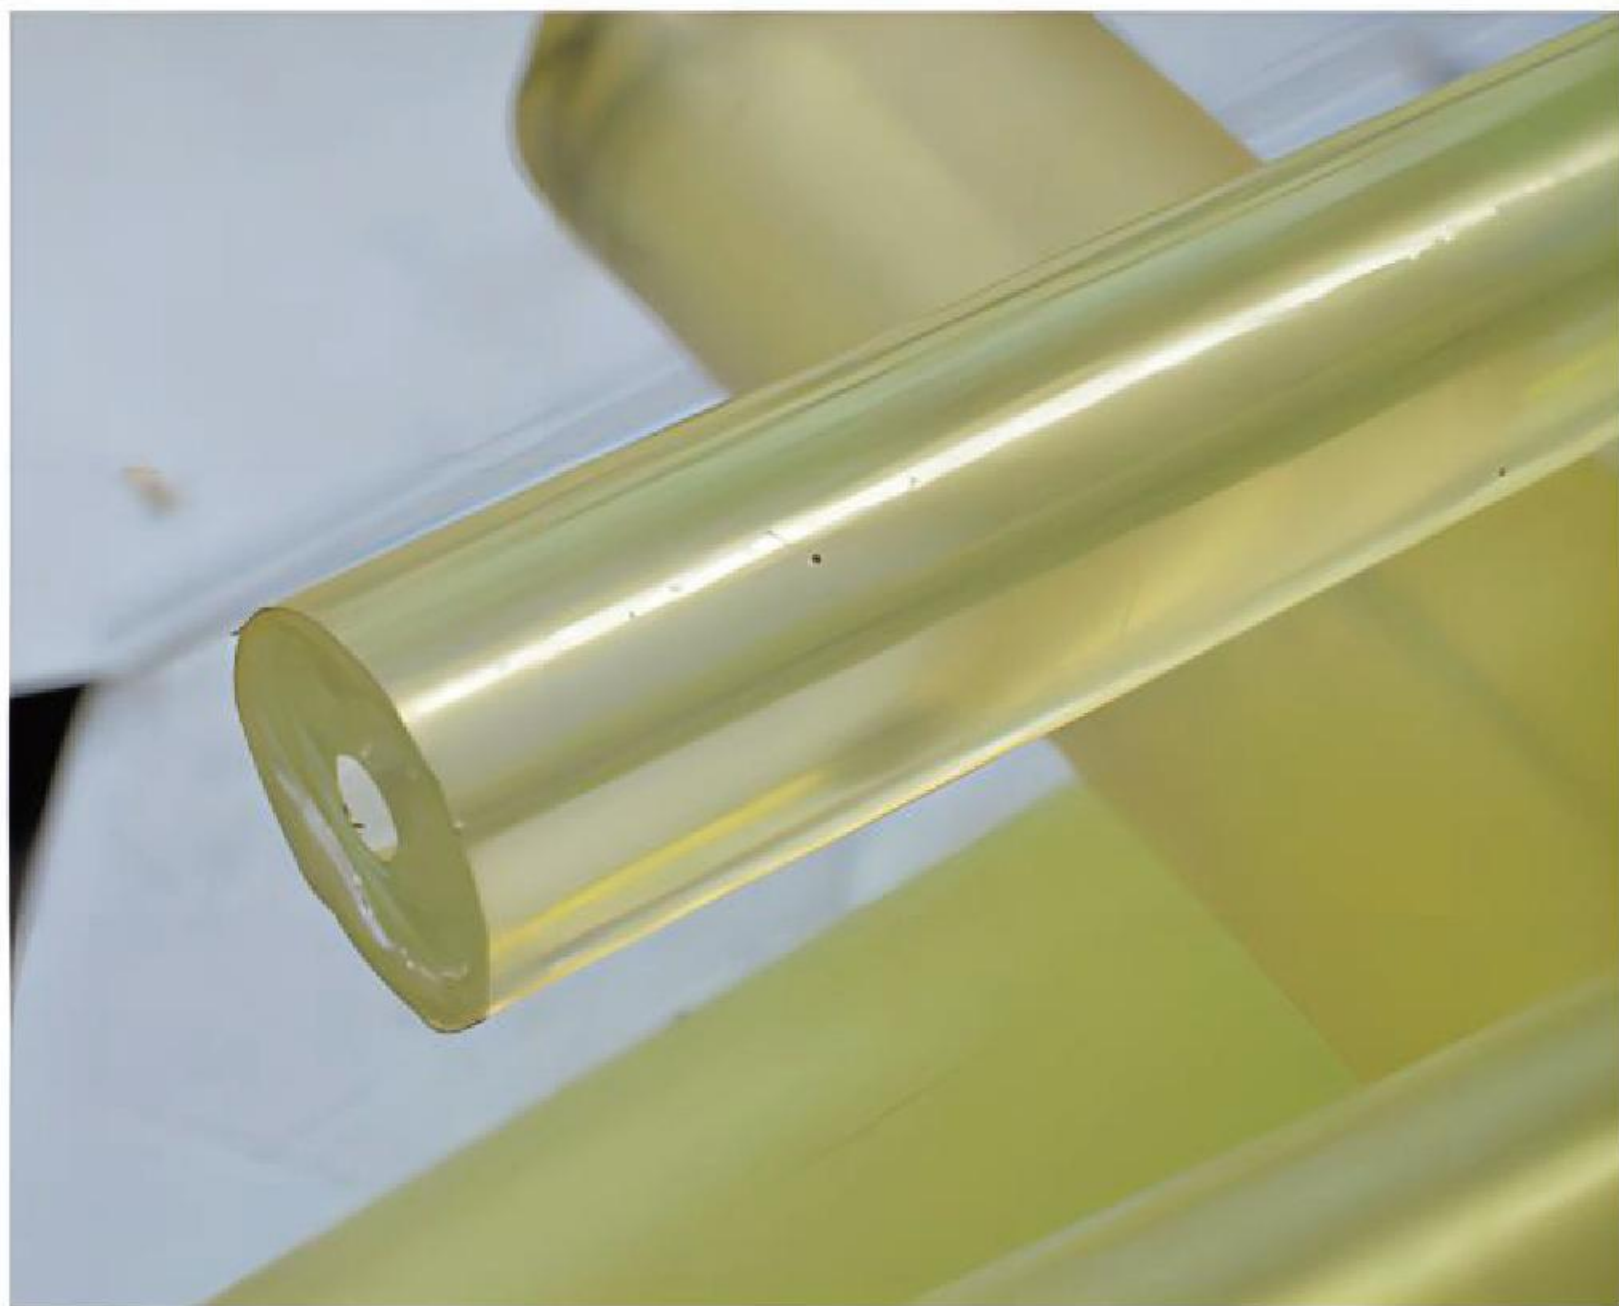

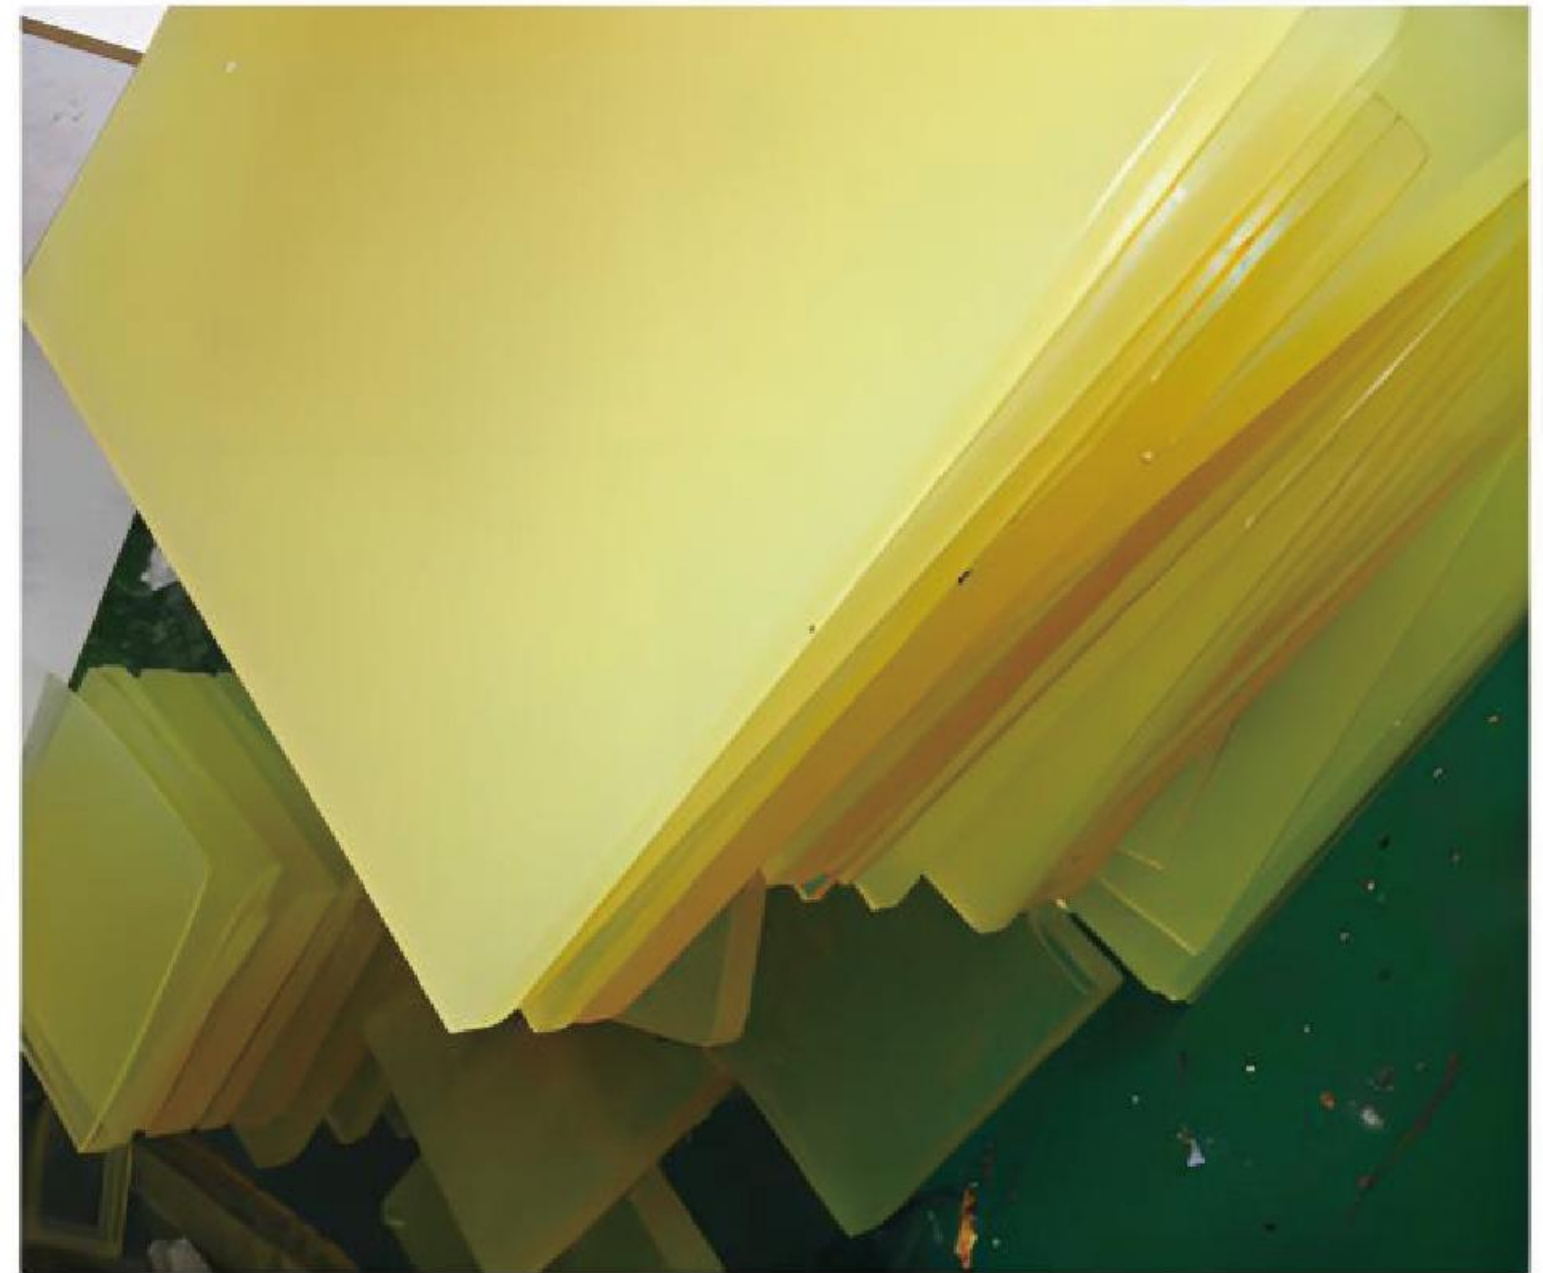

Flotation machine main shaft
sleeve and slurry pipe

Polyurethane classifier shaft
components

Polyurethane Sheets/Rods

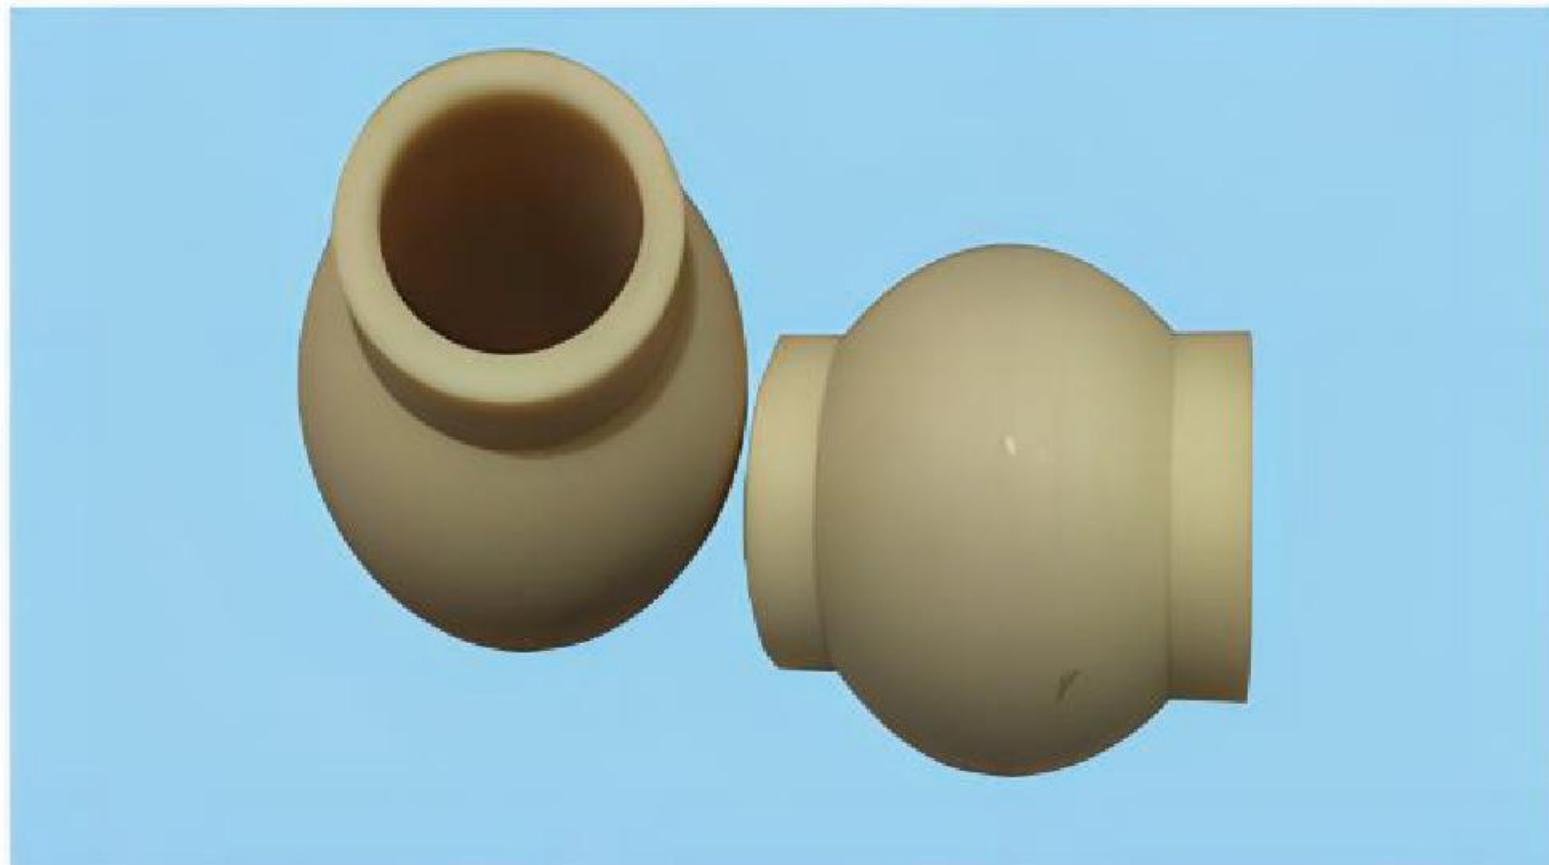

Polyurethane Shaft Series

Custom-Shaped Nylon Parts

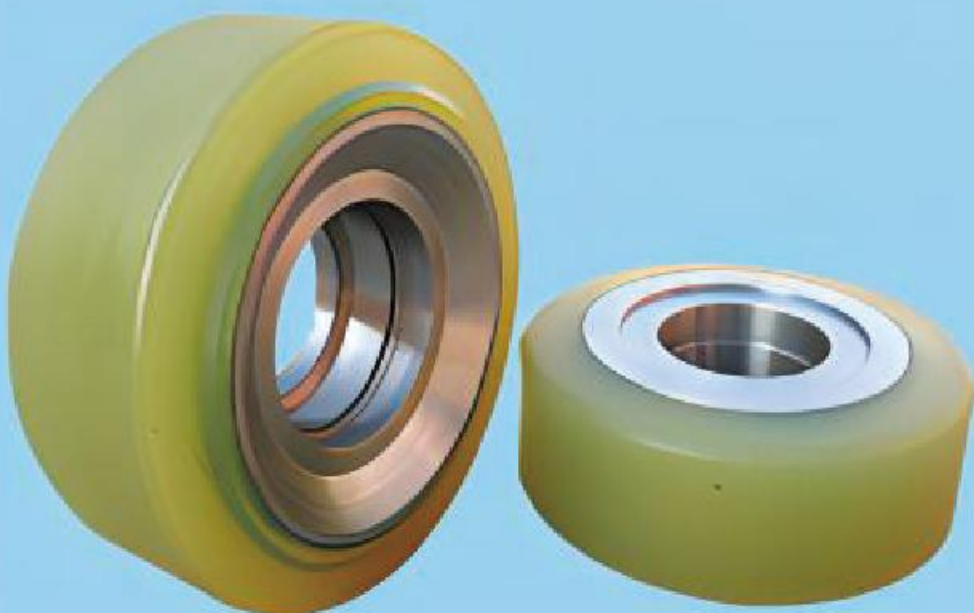

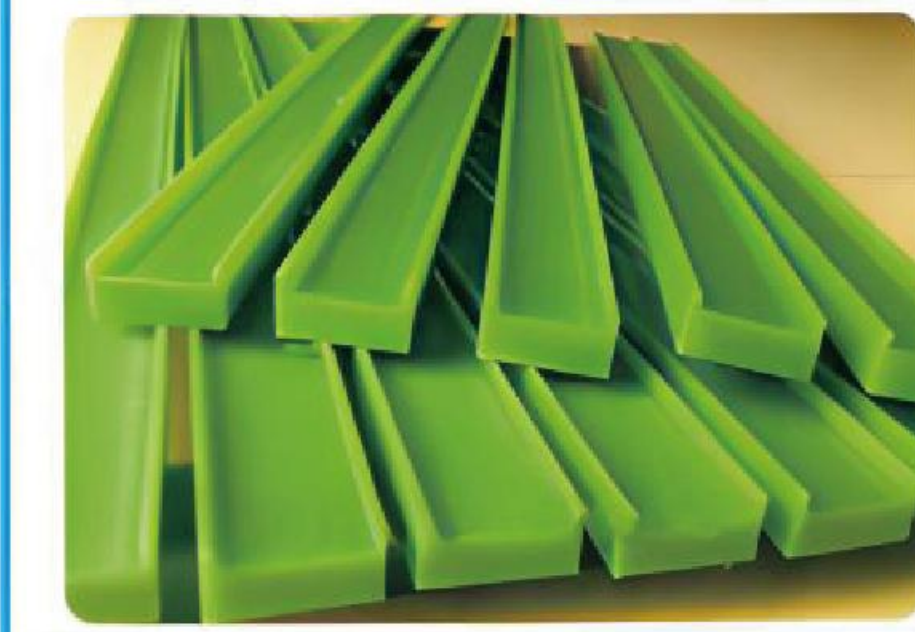

Custom-Shaped Polyurethane Parts

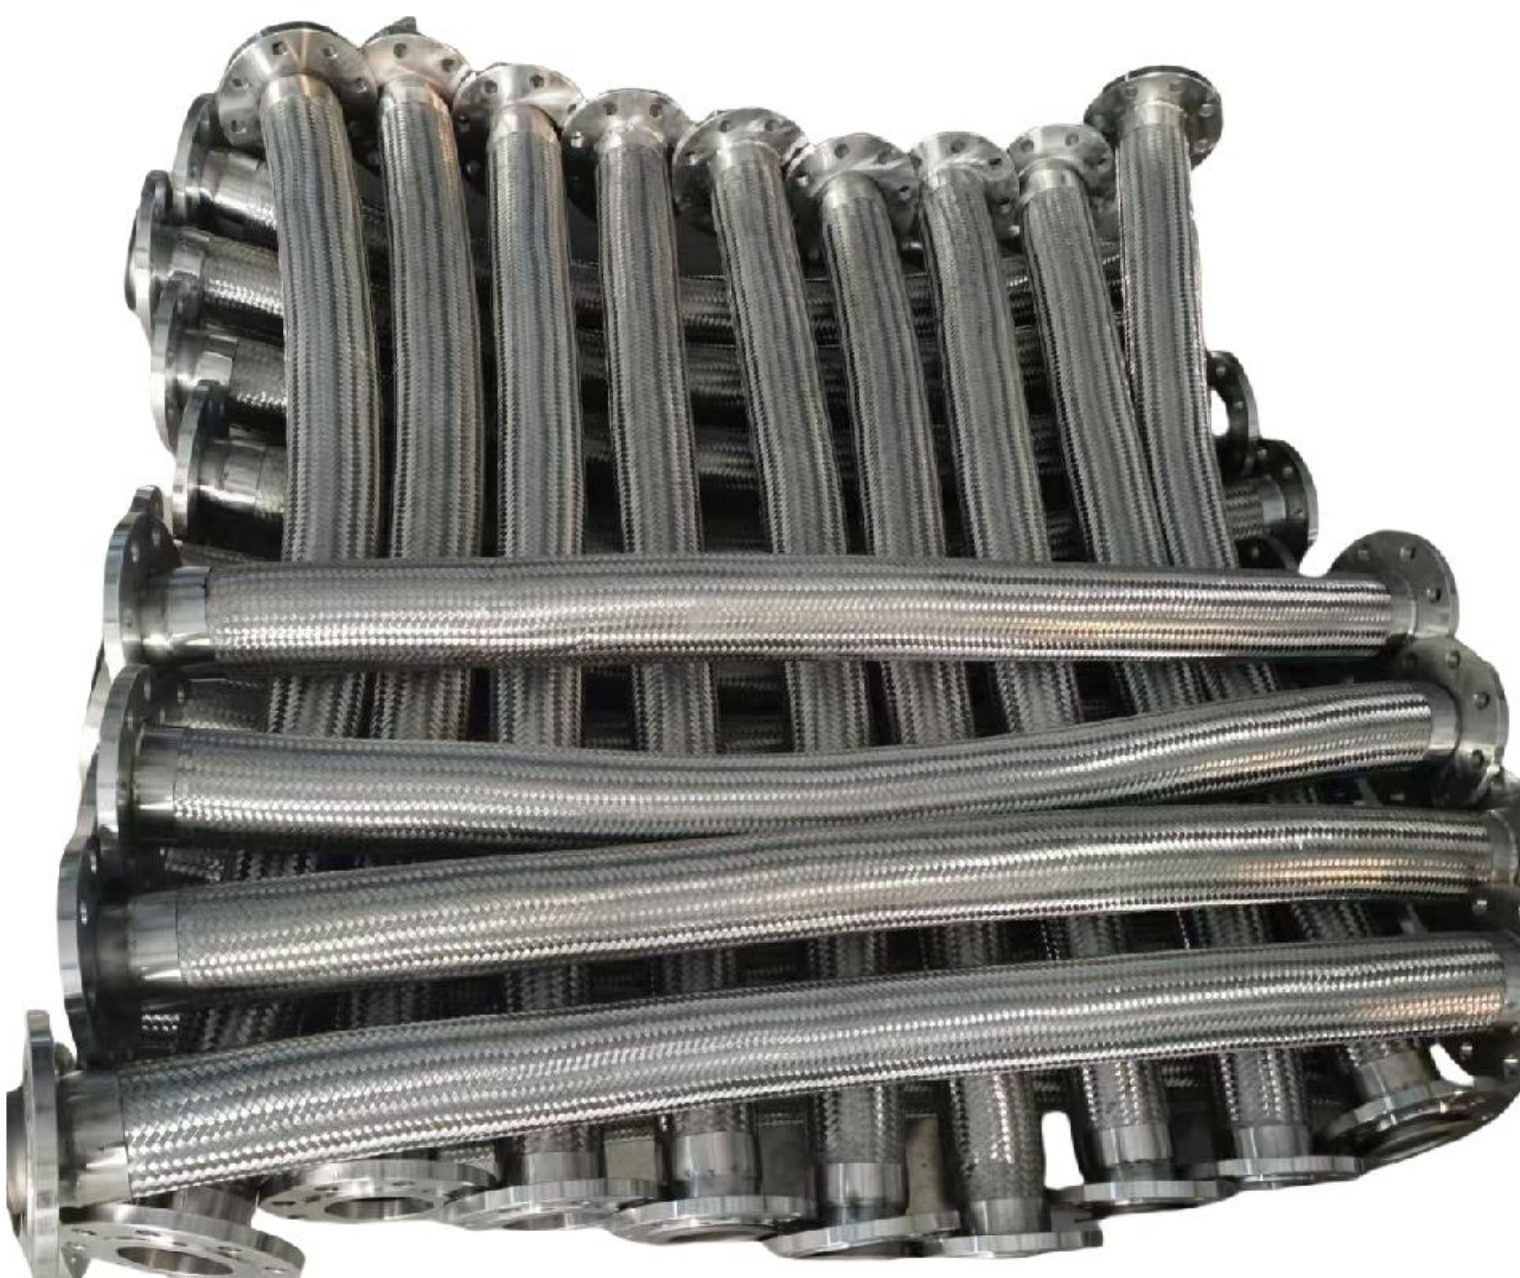

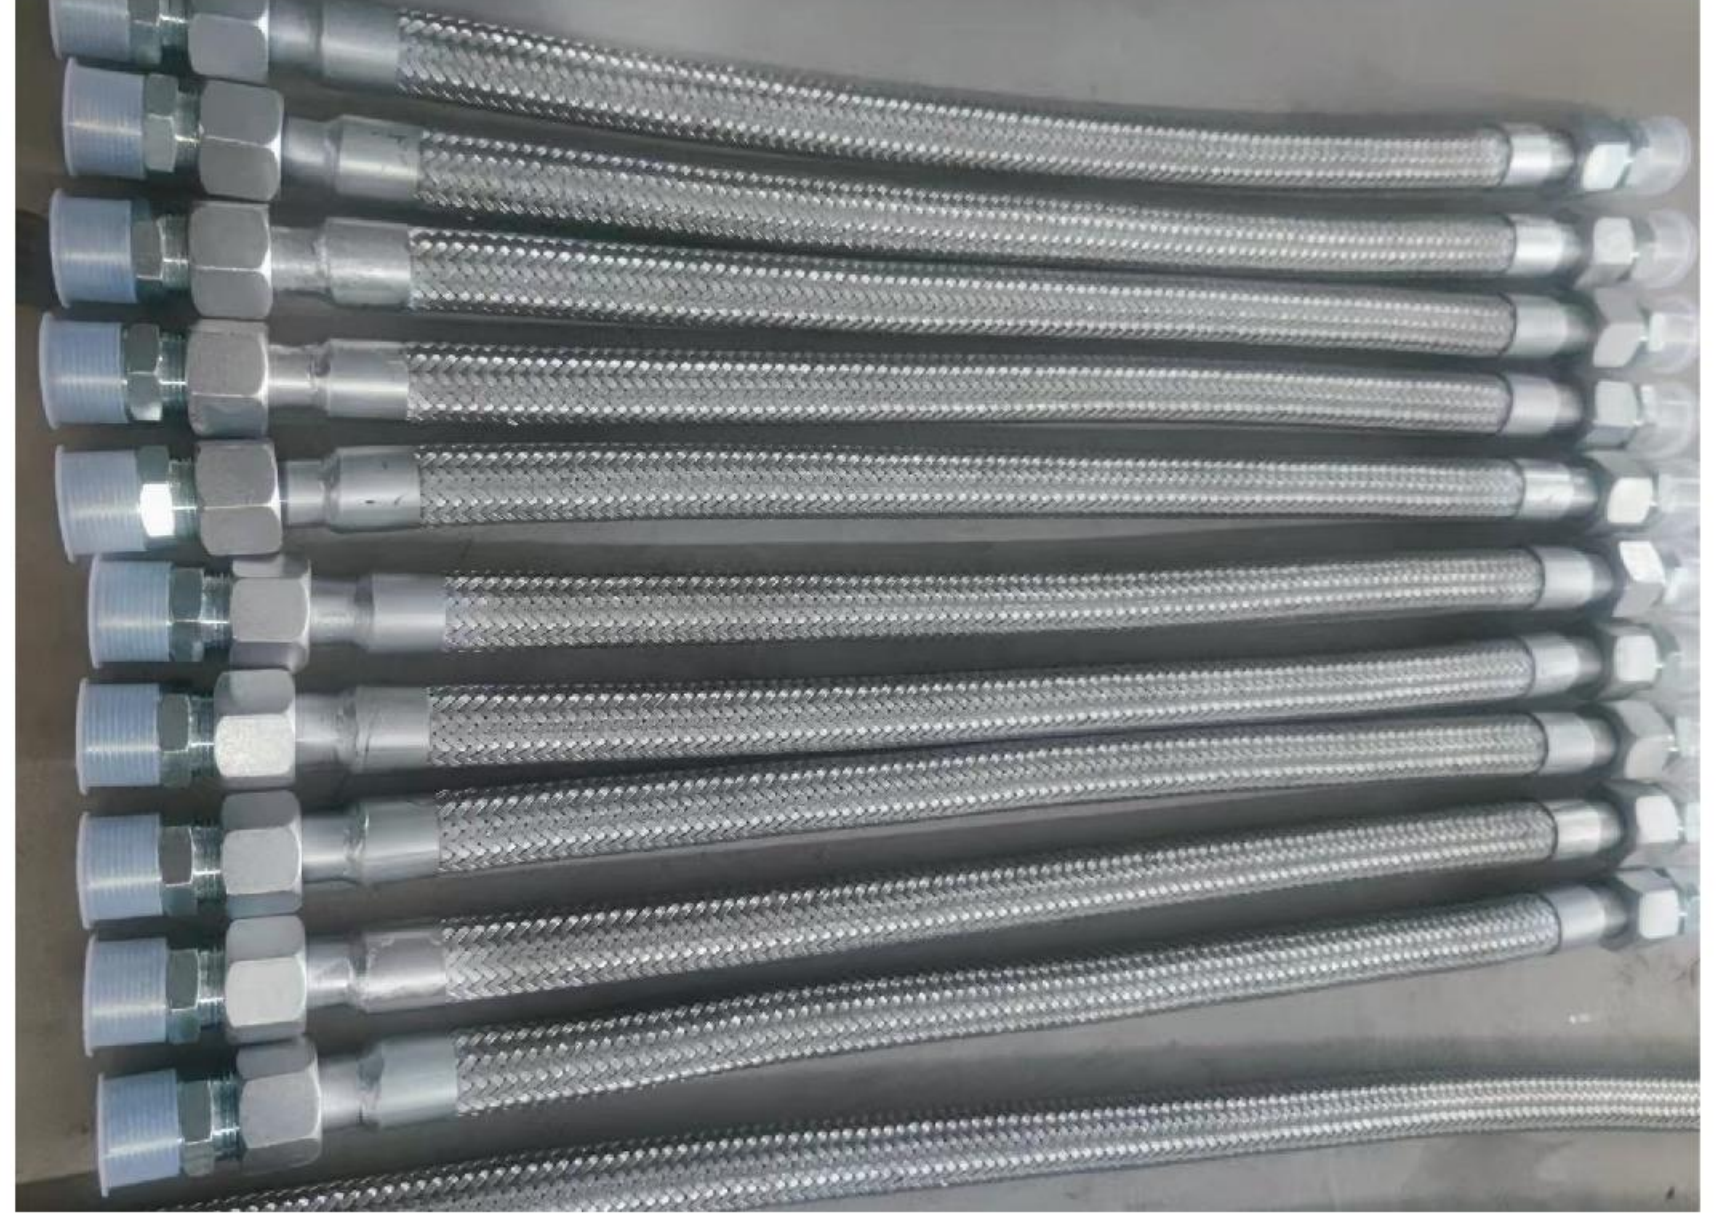

Custom-Shaped Polyurethane Parts

Metal Hose

Braided Metal Hose

Metal Hose

Braided Metal Hose

Metal Expansion Joint

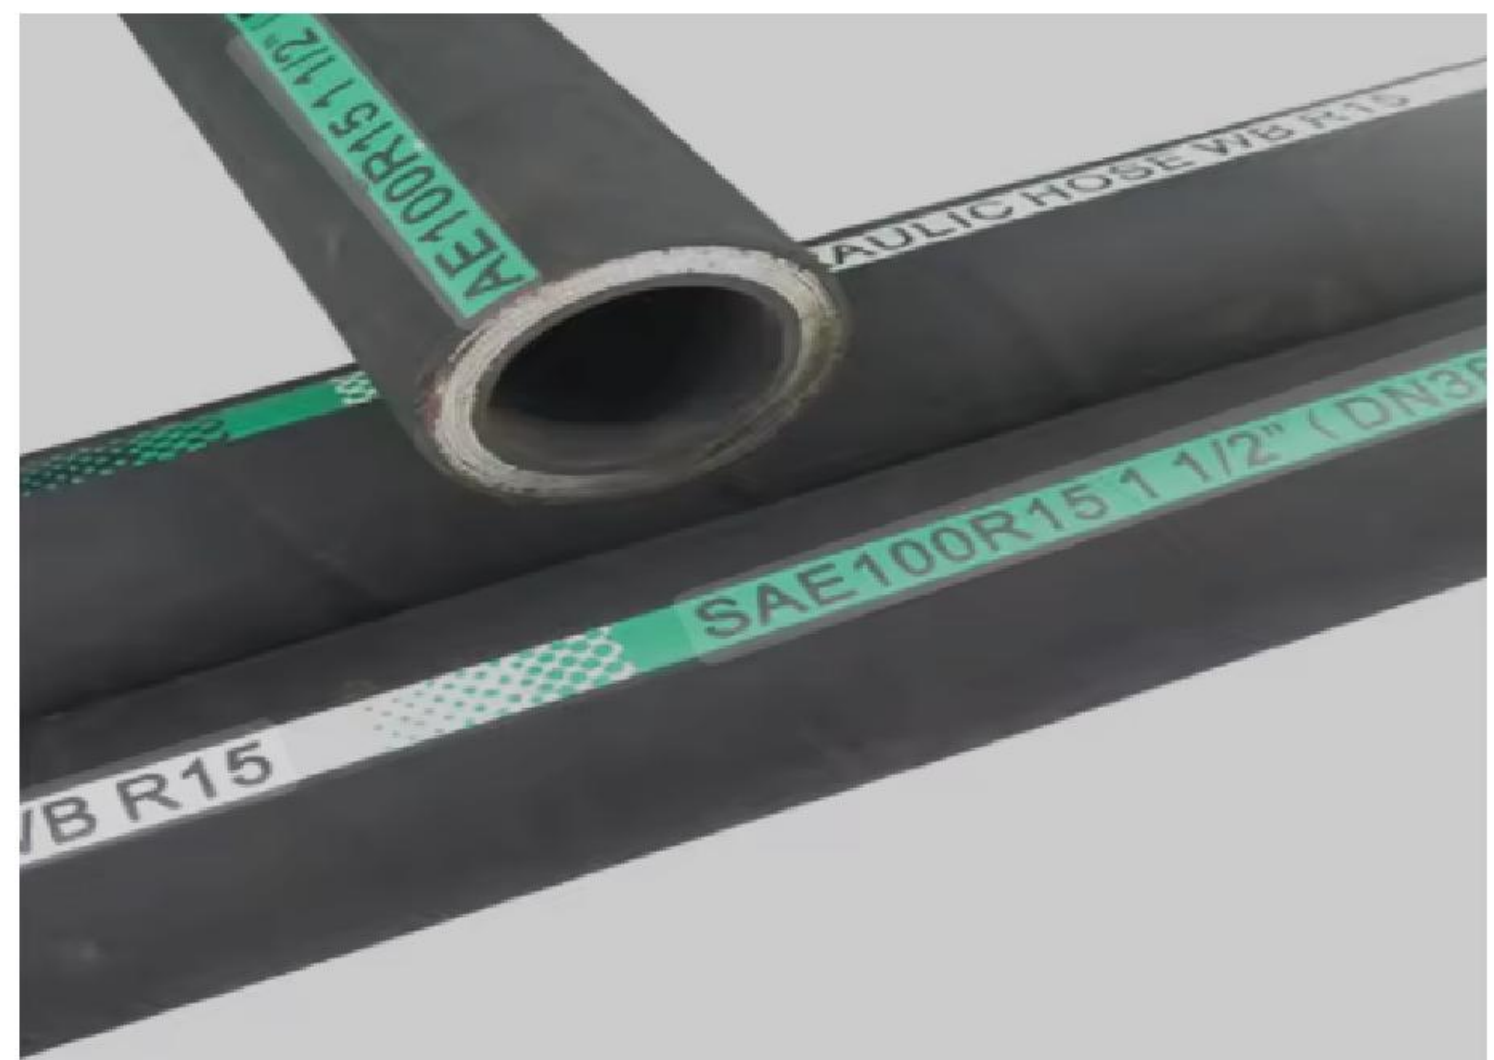

Rubber products

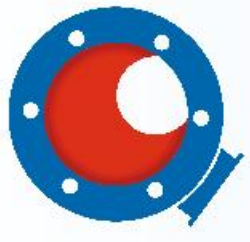

High Pressure Rubber Hose

Low Pressure Rubber Hose

Rubber Products Series

Rubber molded parts

Rubber strips

Rubber special-shaped parts

Rubber sheets

Custom-shaped rubber hoses

Rubber Products Series

Rubber expansion joints

Rubber vibration isolation pads

Composite hoses

Polyurethane products

Crimped rubber hoses

Silicone hoses

Sealing components
